Best Books of the Month: Wall Street Journal, Kirkus Reviews From the Pulitzer Prize – winning author of *The Gulf*, a sweeping cultural and natural history of the bald eagle in America. The bald eagle is regal but fearless, a bird you're not inclined to argue with. For centuries, Americans have celebrated it as "majestic" and "noble," yet savaged the living bird behind their national symbol as a malicious predator of livestock and, falsely, a snatcher of babies. Taking us from before the nation's founding through inconceivable resurgences of this enduring all-American species, Jack E. Davis contrasts the age when native peoples lived beside it peacefully with that when others, whether through hunting bounties or DDT pesticides, twice pushed *Haliaeetus leucocephalus* to the brink of extinction. Filled with spectacular stories of Founding Fathers, rapacious hunters, heroic bird rescuers, and the lives of bald eagles themselves—monogamous creatures, considered among the animal world's finest parents—*The Bald Eagle* is a much-awaited cultural and natural history that demonstrates how this bird's wondrous journey may provide inspiration today, as we grapple with environmental peril on a larger scale.

Birders who come to the American Southwest often keep an eye out for Mexican species that stray across the border. Many neotropical migrants of western North America winter in Sonora, and a host of hummingbirds make their home south of the border as well. This eagerly awaited volume by two respected authorities covers more than 500 species of birds and contains a vast amount of information not available elsewhere. *The Birds of Sonora* describes all the species known from that state and includes information on distribution, seasonal patterns of occurrence, abundance, and habitats. The first book of its kind in more than half a century to treat birds of this Mexican state immediately south of Arizona, it also contains details of nesting activity for breeding species, provides insight into factors influencing distribution, and notes historical changes in status. Each account is accompanied by a range map depicting the bird's range in Sonora—valuable information not available from any other source and useful to anyone interested in the distribution and ecology of North American birds. Drawings by internationally known wildlife artist Ray Harm enhance many of the entries. Because other books on Mexican birds don't treat Sonora in detail, *The Birds of Sonora* is an indispensable resource for birders, and its background descriptions of Sonoran geography, climate, and habitats also make it a key reference for conservation and land use planning. A useful companion to field guides, it is a narrative account that puts readers in touch with birds of this important biogeographic area.

Emily Dickinson's poem "Split the Lark" refers to the "scarlet experiment" by which scientists destroy a bird in order to learn more about it. Indeed, humans have killed hundreds of millions of birds—for science, fashion, curiosity, and myriad other reasons. In the United States alone, seven species of birds are now extinct and another ninety-three are endangered. Conversely, the U.S. conservation movement has made bird-watching more popular than ever, saving countless bird populations; and while the history of actual physical human interaction with birds is complicated, our long aesthetic and scientific interest in them is undeniable. Since the beginning of the modern conservation movement in the mid-nineteenth century, human understanding of and interaction with birds has changed profoundly. In *Scarlet Experiment*, Jeff Karnicky traces the ways in which birds have historically been seen as beautiful creatures worthy of protection and study and yet subject to experiments—scientific, literary, and governmental—that have irrevocably altered their relationship with humans. This examination of the management of bird life in America from the nineteenth century to today, which focuses on six bird species, finds that renderings of birds by such authors as Henry David Thoreau, Emily Dickinson, Don DeLillo, and Christopher Cokinos, have also influenced public perceptions and actions. *Scarlet Experiment* speculates about the effects our decisions will have on the future of North American bird ecology.

In *Made for Each Other: A Symbiosis of Birds and Pines*, Ronald M. Lanner details for the first time this fascinating relationship between wingless-seeded pine trees and seed-dispersing Corvids (nutcrackers and jays), showing how mutualism can drive not only each others' evolution, but affect the ecology of many other members of the surrounding ecosystem as well. In a complex process of mutual dependency, myriad species of both plants and animals - from Engelmann spruce, elk, and moose to red squirrels, bear, and fungi - advance the overall life cycle by taking advantage of the ecological terrain that precedes them. Focusing on the Rocky Mountains and the American Southwest, and ranging as far afield as the Alps, Finland, Siberia, and China, this beautifully illustrated and gracefully written work illuminates the phenomenon of co-evolution.

From the New York Times bestselling author of *The Genius of Birds*, here is a radical examination of the bird way of being and of recent scientific research that is dramatically shifting our understanding of birds — how they live and how they think. 'There is the mammal way and there is the bird way.' This is one scientist's pithy distinction between mammal brains and bird brains: two ways to make a highly intelligent mind. But the bird way is much more than a unique pattern of brain wiring, and, lately, scientists have taken a new look at bird

behaviours. What they are finding is upending the traditional view of how birds conduct their lives, how they communicate, forage, court, breed, and survive. They're also revealing not only the remarkable intelligence underlying these activities, and disturbing abilities we once considered uniquely our own — deception, manipulation, cheating, kidnapping, and infanticide — but also ingenious communication between species, cooperation, collaboration, altruism, culture, and play. Drawing on personal observations, the latest science, and her bird-related travel around the world, from the tropical rainforests of eastern Australia and the remote woodlands of northern Japan, to the rolling hills of lower Austria and the islands of Alaska's Kachemak Bay, Ackerman shows there is clearly no single bird way of being. In every respect — in plumage, form, song, flight, lifestyle, niche, and behaviour — birds vary. It's what we love about them. As E.O. Wilson once said, when you have seen one bird, you have not seen them all.
