Exploring the links between GM foods, glyphosate, and gut health With chronic disorders among American children reaching epidemic levels, hundreds of thousands of parents are desperately seeking solutions to their children's declining health, often with little medical guidance from the experts. What's Making Our Children Sick? convincingly explains how agrochemical industrial production and genetic modification of foods is a culprit in this epidemic. Is it the only culprit? No. Most chronic health disorders have multiple causes and require careful disentanglement and complex treatments. But what if toxicants in our foods are a major culprit, one that, if corrected, could lead to tangible results and increased health? Using patient accounts of their clinical experiences and new medical insights about pathogenesis of chronic pediatric disorders--taking us into gut dysfunction and the microbiome, as well as the politics of food science--this book connects the dots to explain our kids' ailing health. What's Making Our Children Sick? explores the frightening links between our efforts to create higher-yield, cost-efficient foods and an explosion of childhood morbidity, but it also offers hope and a path to effecting change. The predicament we now face is simple. Agroindustrial "innovation" in a previous era hoped to prevent the ecosystem disaster of DDT predicted in Rachel Carson's seminal book in 1962, Silent Spring. However, this industrial agriculture movement has created a worse disaster: a toxic environment and, consequently, a toxic food supply. Pesticide use is at an all-time high, despite the fact that biotechnologies aimed to reduce the need for them in the first place. Today these chemicals find their way into our livestock and food crop industries and ultimately onto our plates. Many of these pesticides are the modern day equivalent of DDT. However, scant research exists on the chemical soup of poisons that our children consume on a daily basis. As our food supply environment reels under the pressures of industrialization via agrochemicals, our kids have become the walking evidence of this failed experiment. What's Making Our

Children Sick? exposes our current predicament and offers insight on the medical responses that are available, both to heal our kids and to reverse the compromised health of our food supply. *Tumors of the Liver and Intrahepatic Bile Ducts* Elsevier Health Sciences Clinical Case Studies for the Family Nurse Practitioner is a key resource for advanced practice nurses and graduate students seeking to test their skills in assessing, diagnosing, and managing cases in family and primary care. With the growth of the older adult population and the increasing need for healthcare providers with geriatric training, students and practitioners must become familiar with the multifaceted issues of elderly sexuality. This text features a combination of research findings, clinical case studies and specific guidelines for assessment and intervention. A variety of topics typically neglected in this population, such as body image and eating disorders, HIV, the long-term impact of sexual trauma in late life, sexuality in institutional settings, sexuality for partners of older adults with dementia and other chronic illnesses, traditional and non-traditional relationships, and information about medications that can cause sexual dysfunction are reviewed in detail. In addition, practitioners are given practical suggestions for interviewing older adults about sexual issues, working with character-disordered older adults, managing sexualized transference in the therapeutic relationship, mediating conflict between professionals on interdisciplinary teams, and assessing HIV and HIV-induced dementia. This volume will be of interest to both clinicians and students of psychology, social work, gerontology, sociology, and physical therapy.

As the number of patients with diabetes increases annually, it is not surprising that the number of patients with diabetes who are admitted to the hospital also increases. Once in the hospital, patients with diabetes or hyperglycemia may be admitted to the Intensive Care Unit, require urgent or elective surgery, enteral or parenteral nutrition, intravenous insulin infusion, or therapies that significantly impact glycemic control (e.g., steroids). Because many clinical outcomes are influenced by the degree of glycemic control, knowledge of the best practices in inpatient diabetes management is extremely important. The field of inpatient management of diabetes and hyperglycemia has grown substantially in the last several years. This body of knowledge is summarized in this book, so it can reach the audience of hospitalists, endocrinologists, nurses and other team members who take care of hospitalized patients with diabetes and hyperglycemia.

CIS Abstracts Elsevier Health Sciences Now in a revised and expanded third edition, this case-based guide emphasizes the latest investigative advances in both imaging and molecular diagnostics and new treatment approaches for a wide variety of common and complex endocrine conditions. Utilizing unique clinical case histories, each main endocrine condition and disorder is curated by a senior Section Editor with an introduction to his or her

area covering both physiology and pathophysiology. This introductory chapter is followed by a number of case histories written by invited experts and designed to cover the important relevant pathophysiology, following a consistent chapter format for ease of use, including bulleted objectives, case presentations, review of the diagnosis, lessons learned, and 3-5 multiple-choice review questions. Section headings include the pituitary, thyroid (overactivity, underactivity and cancer) and parathyroid, adrenal disorders, metabolic bone disease, type 2 diabetes, lipid abnormalities, obesity, and pregnancy. Topics new to this edition include PCOS, transgender medicine and the endocrine effects of viral infections. Home health care is an important aspect of community health and a growing area of healthcare services. *Clinical Case Studies in Home Health Care* uses a case-based approach to provide home healthcare professionals, educators, and students with a useful tool for thoughtful, holistic care. The book begins with a thorough and accessible introduction to the principles of home health care, including a discussion of supporting theoretical frameworks and information on managing complexities, transitioning patients to home care, and preparation for the home visit. Subsequent sections are comprised entirely of case studies organized by body system. Though cases are diverse in content, each is presented in a consistent manner, incorporating relevant data about the patient and caregivers and the approach to patient care and promoting a logical approach to patient presentation. Cases also include helpful tips about reimbursement practices, cultural competence, community resources, and rehabilitation needs.
