This atlas features outstanding full-color photographs of actual cadaver dissections, with accompanying schematic drawings and diagnostic images. The photographs depict anatomic structures more realistically than illustrations in traditional atlases and show students exactly what they will see in the dissection lab. Chapters are organized by region in order of a typical dissection. Each chapter presents structures both in a systemic manner from deep to surface, and in a regional manner. This edition has sixteen additional pages of clinical images—including CT and MRI—that students can compare with cross-sectional anatomic photographs. Many pictures have been electronically enhanced or rescanned for better contrasts.

Este livro contém o essencial para o estudante de anatomia humana. Seu conteúdo é resumido e metodicamente organizado, visando um entendimento sinóptico da anatomia dos principais sistemas do corpo humano. A ausência de figuras no livro deve-se a três motivos: reduzir ao máximo o custo, que é o foco principal; tornar o livro um guia de referência teórico que deve ser acompanhado da visualização em peça anatômica, por meio de atlas ou através da internet, que se constitui em uma fonte ampla e gratuita de imagens de alta qualidade; e, finalmente, reduzir o número de páginas, para que o estudante possa carregá-lo com facilidade.
