Increasingly high unemployment has brought with it a multitude of consequences affecting those without jobs and, beyond them, their families, friends and communities. This book reports findings from original research. It explores, often in the words of the unemployed and others involved, what life without a job is like. It challenges many widely held beliefs about the unemployed - that they are workshy, price themselves out of jobs or earn money illegally on the side - and explores where such misconceptions come from. It reveals the inherent contradictions involved in trying to search for work whilst coping with the experience of unemployment.

The leadership landscape has begun to shift. Researchers have started to realize that previous conceptualizations of leadership that focus only on the positive aspects of leadership are too narrow and may represent a romantic notion of leadership. A growing body of inquiry has emerged with a focus on the darker side of leadership. Allowing for the possibility that leaders can also do harm, either intentionally or unintentionally, broadens the scope of leadership studies and serves to increase the practical implications of leadership research. This book brings together contributions by scholars from several different countries addressing topics such as narcissistic and destructive leadership, ethical leadership and leader errors.

This book focuses on the effect of leadership on organizational outcomes and summarizes the current research findings in the field. It addresses the need for inclusive and interpretive studies in the field in order to interpret leadership literature and suggest new pathways for further studies. Appropriately, a meta-analysis approach is used by the contributors to show the big picture to the researchers by analyzing and combining the findings from different independent studies. In particular, the editors compile various studies examining the relationship between the leadership and thirteen organizational outcomes separately. The philosophy behind this book is to direct future research and practices rather than addressing the limits of current studies.

In the last 20 years, there has been a remarkable emergence of innovations and technological advances that are generating promising changes and opportunities for sustainable agriculture, yet at the same time the agricultural sector worldwide faces numerous daunting challenges. Not only is the agricultural sector expected to produce adequate food, fiber, and feed, and contribute to biofuels to meet the needs of a rising global population, it is expected to do so under increasingly

scarce natural resources and climate change. Growing awareness of the unintended impacts associated with some agricultural production practices has led to heightened societal expectations for improved environmental, community, labor, and animal welfare standards in agriculture. *Toward Sustainable Agricultural Systems in the 21st Century* assesses the scientific evidence for the strengths and weaknesses of different production, marketing, and policy approaches for improving and reducing the costs and unintended consequences of agricultural production. It discusses the principles underlying farming systems and practices that could improve the sustainability. It also explores how those lessons learned could be applied to agriculture in different regional and international settings, with an emphasis on sub-Saharan Africa. By focusing on a systems approach to improving the sustainability of U.S. agriculture, this book can have a profound impact on the development and implementation of sustainable farming systems. *Toward Sustainable Agricultural Systems in the 21st Century* serves as a valuable resource for policy makers, farmers, experts in food production and agribusiness, and federal regulatory agencies.

This book highlights the most significant diseases for humans and their dogs, cats and horses. The examples discussed, which include allergies, osteoporosis, cancer and many more, illustrate that humans and their companion animals may in fact develop similar diseases. The reader - whether expert or interested lay - can thus directly compare between human and animal patients. The animal patient thereby represents a natural disease model, which besides the experimental models, is urgently needed to improve the therapeutic options for both humans and animals.

This volume contributes to the burgeoning field of research on stance by offering a variety of studies based in natural discourse. These collected papers explore the situated, pragmatic, and interactional character of stancetaking, and present new models and conceptions of stance to spark future research. Central to the volume is the claim that stancetaking encompasses five general principles: it involves physical, attitudinal and/or moral positioning; it is a public action; it is inherently dialogic, interactional, and sequential; it indexes broader sociocultural contexts; and it is consequential to the interactants. Each paper explores one or more of these dimensions of stance from perspectives including interactional linguistics and conversation analysis, corpus linguistics, language description, discourse analysis, and sociocultural linguistics. Research languages include conversational American English, colloquial Indonesian, and Finnish. The understanding of stance that emerges is heterogeneous and variegated, and always intertwined with the pragmatic and social aspects of human conduct.

*The Pragmatics of Executive Coaching* is the first linguistic monograph on executive coaching, a recent, not fully professionalized, yet booming helping professional format in the organizational realm. The book is positioned at the interface between applied linguistic analysis and the activity of coaching, coupled with its structuring professional theory. It presents the Basic Activity Model of coaching, a model for the qualitative analysis and description of the discursive co-construction of coaching by coach and client within and across individual coaching sessions and whole processes. The analysis is based on 150 hours of authentic data from the coaching approach Emotionally Intelligent Coaching and presents coaching as hybrid and interdiscursive helping professional format. The gained insights into the discursive layout of coaching interactions advance our linguistic understanding of helping professions as such, contribute to the theoretical and methodological underpinning of coaching and help promote the coaching practice.

*Strategic Approach to Human Resource Management* Vandenhoeck & Ruprecht

Much of our talk revolves around accounting for our own and other people's actions. We praise one person and blame another, justify our own actions, speculate on motives, tell and retell problematic events. This volume draws upon speech communication, sociology and social psychology to offer an original approach to such accounts. Richard Buttny examines social accountability within communication contexts that range from a therapy session to welfare and broadcast news interviews, from everyday conversation to discussions in a Zen monastery. Throughout his wide-ranging analysis of accounts talk, he integrates conversation analytic methods with social constructionism.
