More than a memoir of a custom cafe racer build this book is a tribute to a teacher who inspired young people to be creative with their minds and capable with their hands. Growing up in Fargo, North Dakota in the 1970s and 80s, The Urban Monk had the opportunity to develop a love for machines, metal working and motorcycles. This book provides a glimpse into what life was like for the author and his young friends in Fargo during that time. It is also a poignant defense of industrial arts education in public schools. After an over three year effort building a custom cafe racer in his spare time and documenting the entire process in videos shared with the world on his YouTube channel Urban Monk TV, the author tells the story of how this project became more than a custom motorcycle build - it became a tribute to his middle school Metal Shop teacher who inspired him to go on to a life time of peaceful meditation in his garage with a wrench in his hand. Anyone interested in motorcycles, mechanics, do-it-yourself projects or a historical retrospective of life in 70s-80s Fargo will enjoy this pleasant read.

"Nuclear weapons, since their conception, have been the subject of secrecy. In the months after the dropping of the atomic bombs on Hiroshima and Nagasaki, the American scientific establishment, the American government, and the American public all wrestled with what was called the "problem of secrecy," wondering not only whether secrecy was appropriate and effective as a means of controlling this new technology but also whether it was compatible with the country's core values. Out of a messy context of propaganda, confusion, spy scares, and the grave counsel of competing groups of scientists, what historian Alex Wellerstein calls a "new regime of secrecy" was put into place. It was unlike any other previous or since. Nuclear secrets were given their own unique legal designation in American law ("restricted data"), one that operates differently than all other forms of national security classification and exists to this day. Drawing on massive amounts of declassified files, including records released by the government for the first time at the author's request, Restricted Data is a narrative account of nuclear secrecy and the tensions and uncertainty that built as the Cold War continued. In the US, both science and democracy are pitted against nuclear secrecy, and this makes its history uniquely compelling and timely"--
