This timely new edition of Kenneth A. Small's seminal textbook Urban Transportation Economics, co-authored with Erik T. Verhoef, has been fully updated, covering new areas such as parking policies, reliability of travel times, and the privatization of transportation services, as well as updated treatments of congestion modelling, environmental costs, and transit subsidies. Rigorous in approach and making use of real-world data and econometric techniques, it contains case studies from a range of countries including congestion charging in Norway, Singapore and the UK, light rail in the Netherlands and freeway tolls in the US. Small and Verhoef cover all basic topics needed for any

application of economics to transportation: forecasting the demand for transportation services under alternative policies measuring all the costs including those incurred by users setting prices under practical constraints choosing and evaluating investments in basic facilities designing ways in which the private and public sectors interact to provide services. This book will be of great interest to students with basic calculus and some knowledge of economic theory who are engaged with transportation economics, planning and, or engineering, travel demand analysis, and many related fields. It will also be essential reading for researchers in any aspect of urban transportation.

This indispensable handbook provides helpful strategies for dealing with both the everyday challenges of university teaching and those that arise in efforts to maximize learning for every student. The suggested strategies are supported by research and adaptable to specific classroom situations. Rather than suggest a “ set of recipes ” to be followed mechanically, the book gives instructors the tools they need to deal with the ever-changing dynamics of teaching and learning. Blossoms of the Savannah is the story of two sisters, Taiyo and Resian, who are on the verge of womanhood and torn between their personal ambitions and the humiliating duty to the Nasila tradition. Relocation to their rural home heralds a cultural alienation born of their refusal to succumb to female genital mutilation and early marriages. In pursuit of the delicate and elusive socio-economic cultural balance in Nasila, Ole. Kaelo, the girls' father is ensnared by a corrupt extortionist. To extricate himself he sends his daughters into a flat-spin labyrinth from which they have to struggle to escape.

The Transportation Experience Cengage Learning

While much of the transportation systems in Europe and the United States are mature (if not senescent), the rest of the world is still planning, developing, and deploying new systems. The accomplishments and mistakes of places like the United Kingdom and the United States, then, can teach us lessons that may be applied to places where transportation remains nascent or adolescent. *The Transportation Experience*

seeks to understand the genesis of transportation policy in America and the UK, along with the roles that this policy plays as systems are innovated, deployed, and reach maturity, and how policies might be improved.

Betrayal in the City, first published in 1976 and 1977, was Kenya's national entry to the Second World Black and African Festival of Arts and Culture in Lagos, Nigeria. The play is an incisive, thought-provoking examination of the problems of independence and freedom in post-colonial African states, where a sizeable number of people feel that their future is either blank or bleak. In the words of Mosese, one of the characters: "It was better while we waited. Now we have nothing to look forward to. We have killed our past and are busy killing our future." --Page 4 of cover

Betrayal in the City Oxford University Press

In the last decade many countries turned to private sources to provide services formerly offered by public agencies. Europeans, particularly the British and the French, were leaders in this movement. Developing countries also experimented extensively with privatization in the 1980s, with varying degrees of success. Because governments around the world are heavily involved in transportation, it is a natural focus of privatization experiments and in many ways has been at the cutting edge. *Going Private* examines the diverse

privatization experiences of transportation services and facilities. Cases are drawn from the United States, Asia, Europe, and Latin America. Since almost every country has experimented to some degree with highway and bus privatization, the authors focus particularly on these services, although they also discuss urban rail transit and airports. Highways and buses, they explain, encompass all three of the most common and basic forms of privatization: the sale of an existing state-owned enterprise; use of private, rather than public, financing and management for new infrastructure development; and contracting out to private vendors public services previously provided by government employees. After thoroughly examining these services and discussing the motives for, and objections to, privatization, the authors look at the prospects for privatization in other sectors and industries. They assess those circumstances in which privatization is most likely to succeed and those in which it is most likely to fail, for political as well as economic reasons. The authors conclude that privatization involves many political and social as well as economic dimensions. Privatization is usually not simply a matter of efficiency improvements or capital augmentation but also involves such deeply imbedded societal concerns as equity, income transfers, environmental problems, and attitudes toward taxation and the role of government.

Labour Markets in Low-Income Countries SIAM

High-stakes public examinations exert a dominant influence in most education systems. They affect both teacher and student behavior, especially at the middle and upper levels of secondary education. The content of past examinations tends to dictate what is taught and how it is taught and, more important, what is learned and how it is learned. By changing aspects of these examinations, especially their content and format, education systems can have a strong positive impact on teacher behavior and student learning, help raise student achievement levels, and better prepare students for tertiary-level education and for employment. Examination agencies, many of which have followed the same procedures over decades, can learn from the successes and failures of other systems. This book addresses current issues related

to the development, administration, scoring, and usage of these high-stakes public examinations, identifying key issues and problems related to examinations in many emerging market economies as well as in advanced economies. The book's primary audience consists of public examination officials on national, regional, and state examination boards, but the book should also be of interest to senior education policy makers concerned with certification and learning achievement standards, to academics and researchers interested in educational assessment, to governmental and education agencies responsible for student selection, and to professionals at development organizations. "This extremely well-written and comprehensive book offers a timely review of the diversity of public examination practices worldwide; of the tensions between examinations and learning; and of the technical expertise involved in the creation of valid, reliable, and fair assessments. It reminds us that as "the diploma disease" takes hold with an ever-greater intensity at every stage of education worldwide, and the commercial business of testing flourishes, those

concerned with educational quality and meaningful learning must be on guard to prevent the assessment tail wagging the educational dog.†? Angela W. Little, Professor Emerita, Institute of Education, University College London “This book is very well structured and written and draws on the authors’ remarkable global knowledge across countries and histories. It will be a great asset both to administrators responsible for examinations and to academics and other professionals who seek to understand the nature and impact of examinations of different types and in different settings.†? Mark Bray, UNESCO Chair Professor of Comparative Education, University of Hong Kong; and former Director, UNESCO International Institute for Educational Planning “I am sure that *Public Examinations Examined*, which thoroughly analyzes the practice of public examinations in different countries and makes profound and well-grounded conclusions, will arouse very great interest and will serve to further improve public examinations.†? "Employment and job creation are key components in achieving economic growth and sustainable development, particularly in low-income countries. The growing size of the working-age population in many developing regions underscores the need to further strengthen labour market structures in the world's poorest countries. Despite the importance of studying emerging labour markets, and investigating which policies are more successful, the evidence is rather limited. Against this backdrop, the joint IZA/FCDO Growth and Labour Markets in Low Income Countries (GLM|LIC) programme was established and has taken important steps to close this gap. Covering topics such as poverty, informality and rural labour, skills training and behaviour, gender inequality, youth and child labour, and migration, this volume presents key takeaways from most recent research in the field. Which development policies will work, which strategies will fail? The authors provide an in-depth discussion of current development programmes, based on the results of new

evaluation studies, and derive important policy lessons"--Publisher's description.

Linear Ordinary Differential Equations, a text for advanced undergraduate or beginning graduate students, presents a thorough development of the main topics in linear differential equations. A rich collection of applications, examples, and exercises illustrates each topic. The authors reinforce students' understanding of calculus, linear algebra, and analysis while introducing the many applications of differential equations in science and engineering. Three recurrent themes run through the book. The methods of linear algebra are applied directly to the analysis of systems with constant or periodic coefficients and serve as a guide in the study of eigenvalues and eigenfunction expansions. The use of power series, beginning with the matrix exponential function leads to the special functions solving classical equations. Techniques

from real analysis illuminate the development of series solutions, existence theorems for initial value problems, the asymptotic behavior solutions, and the convergence of eigenfunction expansions.

It is organized around major components of animal use: Key concepts of animal care and use. The Guide sets the framework for the humane care and use of laboratory animals. Animal care and use program. The Guide discusses the concept of a broad Program of Animal Care and Use, including roles and responsibilities of the Institutional Official, Attending Veterinarian and the Institutional Animal Care and Use Committee. Animal environment, husbandry,

and management. A chapter on this topic is now divided into sections on terrestrial and aquatic animals and provides recommendations for housing and environment, husbandry, behavioral and population management, and more. Veterinary care. The Guide discusses veterinary care and the responsibilities of the Attending Veterinarian. It includes recommendations on animal procurement and transportation, preventive medicine (including animal biosecurity), and clinical care and management. The Guide addresses distress and pain recognition and relief, and issues surrounding euthanasia. Physical plant. The Guide identifies design issues, providing construction guidelines for functional areas; considerations such as drainage, vibration and noise control, and environmental monitoring; and specialized facilities for animal housing and research needs. The Guide for the Care and Use of Laboratory Animals provides a framework for the judgments required in the management of animal facilities. This updated and expanded resource of proven value will be important to scientists and researchers, veterinarians, animal care personnel, facilities managers, institutional administrators, policy makers involved in research issues, and animal welfare advocates.

For many scholars, the study of community and community development is at a crossroads. Previously dynamic theories appear not to have kept pace with the major social changes of our day. Given our constantly shifting social reality we need new ideas and research that pushes the boundaries of our extant community theories. Theory, Practice, and Community Development stretches the traditional boundaries and applications of well-established community development theory, and establishes new theoretical approaches rooted in new disciplines and new perspectives on community development. Expanded from a special issue of the journal Community Development, Theory, Practice, and Community Development collects previously published and widely cited essays, as well as new theoretical and empirical research in community development. Compiled by the editors of Community Development, the essays feature topics as varied as placemaking, democratic theory and rural organizing. Theory, Practice, and Community Development is vital for scholars and practitioners coming to grips with the rapidly changing definition of community.
