influence upon the delivery of patient and family care. Although it is acknowledged that each A and E department is different and that the environment and local resources affect the translation of theory into practice, questioning and subsequent challenge of the environment, work issues and ideas should help the reader to widen the debate about nursing in A and E and its anticipated growth into the next century. The intended outcome of such analysis by the reader may be to challenge practice.

Alternatively information presented within the book may support or enhance work currently being undertaken within a number of A and E departments.

With reference to the format, the book is not intended to be read from cover to cover. Instead the reader will find the book a valuable source of information that can be dipped into when required, a book where the sampling of arguments put forward by various contributors can be considered.

The British Industrial Revolution has long been seen as the spark for modern, global industrialization and sustained economic growth. Indeed the origins of economic history, as a discipline, lie in 19th-century European and North American attempts to understand the foundation of this process. In this book, William J. Ashworth questions some of the orthodoxies concerning the history of the industrial revolution and offers a deep and detailed reassessment of the subject that focuses on the State and its role in the development of key British manufactures. In particular, he explores the role of State regulation and protectionism in nurturing Britain's negligible early manufacturing base. Taking a long view, from the mid 17th century through to the 19th century, the analysis weaves together a vast range of factors to provide one of the fullest analyses of the industrial revolution, and one that places it firmly within a global context, showing that the Industrial Revolution was merely a short moment within a much larger and longer global trajectory. This book is an important intervention in the debates surrounding modern industrial history will be essential reading for anyone interested in global and comparative economic history and the history of globalization.

Tactical Combat Casualty Care (TCCC) has saved hundreds of lives during our nation's conflicts in Iraq and Afghanistan. Nearly 90 percent of combat fatalities occur before a casualty reaches a medical treatment facility.

Therefore, the prehospital phase of care is needed to focus on reducing the number of combat deaths. However, few military physicians have had training in this area and, at the onset of hostilities, most combat medics, corpsmen, and pararescue personnel in the U.S. military have been trained to perform battlefield trauma care through civilian-based trauma courses. These courses are not designed

for the prehospital combat environment and do not reflect current practices in the area of prehospital care. TCCC was created to train Soldiers and medical personnel on current best practices for medical treatment from the point of injury to evacuation to Role 3 facilities
