Making Cities Resilient Pietro
Giaquinto
Enabling young children to
achieve their full
developmental potential is a
human right and an essential
requisite for sustainable
development. Given the critical

importance of enabling children aimed at caregivers, health professionals and other workers to make the best start in life, the health sector, among other sectors, has an important role and responsibility to support nurturing care for early childhood development. This guideline provides direction for strengthening policies and programmes to better address early childhood development. It is primarily the family who provides the nurturing care that children need to develop in the earliest years. Many parents and other caregivers need support to put this into practice. Therefore, the guideline contains four recommendations

who can assist them, as well as policy-makers and other stakeholders. The recommendations relate to i) providing responsive care and activities for early learning during the first 3 years of life; ii) including responsive care and early learning as part of interventions for optimal nutrition of infants and young children; and iii) integrating psychosocial interventions to support maternal mental health into early childhood health and development services.

The Dogs of the Sinai

San Francisco : A.L. Bancroft
Injuries are a leading cause of death and disability in children. This report presents evidence on how they can be prevented and calls for greater commitment and action from policy-makers and practitioners to decrease the burden. Every year, unintentional injuries kill nearly 42,000 children and young people under the age of 20 in the WHO European Region.

Injuries are the leading cause of death among those aged 5-19 years, and 5 out of 6 of these deaths occur in low- and middle-income countries. Irrespective of country income, the burden falls disproportionately on children from the most disadvantaged groups. The leading types of unintentional injuries are road traffic injuries, drowning, poisoning, burns and falls. All injury types have similar main causes and

socioeconomic and environmental determinants. Children are particularly vulnerable to injuries and need special consideration to safeguard their rights to health and safe environments, free from injury. This report, companion to the World Report on Child Injury Prevention, presents the evidence on both the great potential for injury prevention and the effectiveness and value for money of measures already in use in European countries

with low injury mortality. It shows why health systems and particularly programs for child health throughout the WHO European Region should give priority to preventing and controlling child injury.

The recent development of ideas on biodiversity conservation was already being considered almost three-quarters of a century ago for crop plants and the wild species related to them, by the Russian geneticist N.!. Vavilov. He was

undoubtedly the first scientist to understand the importance for humankind of conserving for utilization the genetic diversity of our ancient crop plants and their wild relatives from their centres of diversity. His collections showed various traits of adaptation to environmental extremes and biotypes of crop diseases and pests which were unknown to most plant breeders in the first quarter of the twentieth century. Later, in the 1940s-1960s scientists began to realize that the pool of genetic diversity known to Vavilov and his colleagues was beginning to disappear. Through the replacement of the old, primitive and highly diverse land races by uniform modern varieties

created by plant breeders, the crop gene pool was being eroded. The genetic diversity of wild species was equally being threatened by human activities: over-exploitation, habitat destruction or fragmentation, competition resulting from the introduction of alien species or varieties, changes and intensification of land use, environmental pollution and possible climate change.

As the world has transformed, so have cities. Today, cities are home to 54 percent of the world's population, and by the middle of this century that figure will likely rise to 66 percent. According to the United Nations (UN) Habitat I (1972), Habitat II (1996) and Habitat III (2016) summits, cities are facing many serious challenges, including growing inequality, security concerns and the worsening impacts of climate change. Uncontrolled urbanization has led to many problems (haphazard growth

of areas, emergence of slums, inadequate water and power supply, poor sanitation, shortage of transport and other civic amenities, shrinking green spaces, pollution, crime, and urban disaster risks such as fire, flood, road and industrial accidents, etc.). Worldwide, communities at the international, national and local level are continuously working to improve human habitats. In order to make our planet more sustainable, the UN has moved from the Millennium Development

Goals (MDG) to the Sustainable Development Goals (SDG). Among the latter, the aim of SDG 11 is to "...make cities and human settlements inclusive, safe, resilient and sustainable." In light of these challenges, various terms have emerged to help understand urban issues. Visualizing the problem, the United Nations program "Making Cities Resilient" is focused on mitigating the disaster risk in urban areas. This book analyzes terms such as: sustainable, resilient, livable, inclusive, smart and world

class city, which have emerged in the process of combating urban challenges in today's world. The book addresses emerging concepts for cities, challenges and potentials, urban environments, health and planning/policies. Covering 14 large cities in India, as well as case studies from Japan, Singapore, Thailand, Malaysia, Poland and Sweden, it provides a regional dimension to and micro-level perspective on urban issues.

La Prova Di Inglese Per Tutti i Concorsi Springer Science & Business Media

As a propagandist Claudian offers unique illumination of the intrigues inside and between the rival courts of Milan and Constantinople in the decisive years following the death of Theodosius the Great.

Though a Greek by birth, Claudian revived Latin poetry with a flair not seen since the Silver Age - and not to be seen again. This book studies Claudian's political and propagandist techniques, his accounts of Stilico's campaigns and rivals, his debt to Greek rhetorical theory and contemporary poetry, his culture, attitudes to Rome and its problems and, not least, his position as a pagan at a Christian court. An epilogue traces his influence in medieval

times and on English literature. Alan Cameron is Anthon Professor of Latin Language and Literature at Columbia University.

The Sustainable Development Report 2021 features the SDG Index and Dashboards, the first and widely used tool to assess country performance on the UN Agenda 2030 and the Sustainable Development Goals. The report analyses and outlines what needs to happen for

the Decade of Action and Delivery of the SDGs. In order to build back better following the Covid-19 pandemic, especially low-income countries will need increased fiscal space. The report frames the implementation of the SDGs in terms of six broad transformations. The authors examine country performance on the SDGs for 193 countries using a wide array of indicators, and calculate future trajectories, presenting a

number of best practices to achieve the historic Agenda 2030. The views expressed in this report do not reflect the views of any organizations, agency or programme of the United Nations. People's well-being, industrial competitiveness and the overall functioning of society are dependent on safe, secure, sustainable and affordable energy. The energy infrastructure which will power citizens' homes, industry and services in 2050, as well as the buildings which people will use, are being designed and built now. The pattern of energy production and use in

2050 is already being set. European Report on Child Injury Prevention WHO Regional Office Europe Revered for pioneering the law and literature movement, *The Legal Imagination* celebrates its 45th year of inspiring students and readers around the world. In this special Anniversary Edition, introduced with a new Foreword by author James Boyd White, the original, unabridged text has been carefully reproduced to challenge a new generation of readers to understand the

language of the law through the prism of literature. The topics covered in *The Legal Imagination* are as eclectic as its readership, juxtaposing examples of legal writing alongside poetry, philosophy, and literary criticism. White frames thought-provoking discussions on topics that intersect both legal and non-legal discourse, like reading Edmund Burke's rhetoric alongside the homicidal persuasion of Lady Macbeth, or comparing elegiac poetry with the terminology of a final will and testament.

White asks his readers not only to analyze legal and non-legal literature, but to consider the power of language, and how it can be reimagined. Excerpted authors include Fyodor Dostoevsky, Benjamin Cardozo, Albert Camus, Claude Lvi-Strauss, and Emily Dickinson. First published in 1973, *The Legal Imagination* broke convention and urged students to understand the law beyond memorization, encouraging readers "to trust and follow their own curiosity" and to come to

terms with the nature and potential limits of legal language. It should be read not only by people of the law, but by anyone with an interest in language and power, and in writing as a way of thinking and creating. The book has a timeless quality. James Boyd White writes in the Foreword, "I think in fact that it may be of wider relevance now than when it was first published, for its central concern is with integrity--integrity of the law, of language, of the individual person--at a time when integrity itself sometimes

seems to be threatened as a value."

Energy Roadmap 2050

Sagwan Press

The driving cultural force of that form of life we call 'modern' is the desire to make the world controllable. Yet it is only in encountering the uncontrollable that we really experience the world – only then do we feel touched, moved and alive. A world that is fully known, in which everything has been planned and mastered, would be a dead world.

Our lives are played out on and even despair, which the border between what we can control and that which lies outside our control. But because we late-modern human beings seek to make the world controllable, we tend to encounter the world as a series of objects that we have to conquer, master or exploit. And precisely because of this, 'life,' the experience of feeling alive and truly encountering the world, always seems to elude us. This in turn leads to frustration, anger then manifest themselves in, among other things, acts of impotent political aggression. For Rosa, to encounter the world and achieve resonance with it requires us to be open to that which extends beyond our control. The outcome of this process cannot be predicted, and this is why moments of resonance are always concomitant with moments of uncontrollability. This short book – the sequel to Rosa's path-breaking

work on social acceleration and resonance – will be of great interest to students and scholars in sociology and the social sciences and to anyone concerned with the nature of modern social life.
