This unique volume is the definitive, authoritative assessment of the environment and development of the Mediterranean Basin and its 22 countries and territories, spanning five decades, from 30 years in the past to 20 years into the future. Produced by the Blue Plan within the framework of UNEP/Mediterranean Action Plan and backed by the EU and national governments, it brings together the work of more than 100 researchers from dozens of national, regional and local governments and research groups into the only comprehensive insight into sustainable development issues in the region. Core coverage includes water, energy, transport, cities, rural and coastal areas, as well as related issues such as climate change, population growth, geopolitical changes, unemployment and poverty, pollution, economic and environmental policies, regional cooperation and the Euro-Mediterranean

Partnership. Information is clearly presented through hundreds of full-colour maps, graphs, tables and a wealth of case studies. This is a must-have reference for all levels of government, NGOs and libraries, as well as practitioners, academics and businesses involved in economics, natural resource management, land and maritime transport, water, energy, infrastructure, urban and rural development, agriculture, fishing and aquaculture, tourism and coastal management.

Un radeau jaune sur l'eau bleue BoD – Books on Demand
The focus of this book is on the key water-related vulnerabilities to climate change in Africa, particularly in its most vulnerable areas, exploring potential management responses to such vulnerabilities. The African countries are particularly exposed and vulnerable to the negative impacts of climate change, with important impacts on water resources and hydrological systems, water availability, water resource management and sea level variations. Already, under various anthropogenic pressures, the status of water resources in Africa has been changing over the past decades, with decreasing water quality, falling groundwater levels, and variability in rainfall, both in terms of timing and intensity. Climate change will further accelerate the rate of change, affecting the ability of people and societies to respond in a timely manner. It is clear that there is no quick fix to the pressures imposed on water resources by climate change. Increasing the resilience of ecosystems and communities to extreme events such as flooding and drought, and integrating climate change risks and opportunities into development decision-making is indeed a key challenge, as much a technical climate-change one, as a political and developmental challenge. The book, in this regard, intends to contribute to the debate around climate change in relation to water resources management in Africa, and in particular inform policy decisions and actions that will improve governments' and communities' ability to manage the challenges of climate change and variability in relation to the

aquatic ecosystems that they depend on. The knowledge collected in this book will benefit policy makers, researchers, as well as other stakeholders.

This multi-disciplinary book presents the most recent advances in exergy, energy, and environmental issues. Volume 2 focuses on applications and covers current problems, future needs, and prospects in the area of energy and environment from researchers worldwide. Based on selected lectures from the Seventh International Exergy, Energy and Environmental Symposium (IEEES7-2015) and complemented by further invited contributions, this comprehensive set of contributions promote the exchange of new ideas and techniques in energy conversion and conservation in order to exchange best practices in "energetic efficiency". Applications are included that apply to the green transportation and sustainable mobility sectors, especially regarding the development of sustainable technologies for thermal comforts and green transportation vehicles. Furthermore, contributions on renewable and sustainable energy sources, strategies for energy production, and the carbon-free society constitute an important part of this book. Exergy for Better Environment and Sustainability, Volume 2 will appeal to researchers, students, and professionals within engineering and the renewable energy fields.

The Complete Poetry of Aimé Césaire gathers all of Césaire's celebrated verse into one bilingual edition. The French portion is comprised of newly established first editions of Césaire's poetic oeuvre made available in French in 2014 under the title *Poésie, Théâtre, Essais et Discours*, edited by A. J. Arnold and an international team of specialists. To prepare the English translations, the translators started afresh from this French edition. Included here are translations of first editions of the poet's early work, prior to political interventions in the texts after 1955, revealing a new understanding of Césaire's aesthetic and political trajectory. A truly comprehensive picture of Césaire's poetry and poetics is made possible thanks to a

thorough set of notes covering variants, historical and cultural references, and recurring figures and structures, a scholarly introduction and a glossary. This book provides a new cornerstone for readers and scholars in 20th century poetry, African diasporic literature, and postcolonial studies.

Cet ouvrage propose une méthode opérationnelle pour analyser une communication visuelle, principalement le packaging. Cette méthode, dénommée SEMIO-PACK©, permet de décoder les signes du packaging et d'établir son positionnement dans les moindres détails. Ses piliers méthodologiques sont empruntés aux disciplines que sont la sémiotique, l'histoire de l'art, la communication et les sciences cognitives. Avant de présenter l'application de cette méthode à de nombreux packagings (couvrant une cinquantaine de catégories de produits grande consommation), l'ouvrage présente les fondements de la sémiotique puis les processus cognitifs et symboliques impliqués dans la perception visuelle. Cette méthode se révèle un outil indispensable pour optimiser les processus d'analyse et de création du packaging. Clés et codes du packaging s'adresse aux professionnels, étudiants et chercheurs dans les domaines du marketing, du design, de la communication et de la sémiotique ainsi qu'à toute personne curieuse de maîtriser les rouages de la communication visuelle.

Between 1750 and his death in 1781, the Marquis de Marigny?brother of Madame de Pompadour, courtier to Louis XV, and one of eighteenth-century France's important patrons of art and architecture?amassed a collection that was broad in scope, progressive in taste, and exceptional in quality and provenance. This book offers a transcription of the exhaustive inventory of Marigny's estate together with an essay in which Alden R. Gordon not only sketches Marigny's life and times but also re-creates the interiors and grounds where the paintings, statues, books, household goods, and other property listed in the inventory were displayed and used. Also included are plans of Marigny's last four residences; lists of heirs, paintings, and auction sales; transcriptions of shipping manifests and sales catalogs; indexes; and a glossary.

This innovative volume explores the role of networks and variation in their forms of governance in delivering successful local and regional economic development. Written by experts from different disciplines, it offers a judicious mix of general theoretical reflections and specific case studies of different places, sectors, and scales. The result is an important contribution to an emerging research agenda on networked governance and the governance of networks and their influence on competitiveness in and across different scales of economic activities. Bob Jessop, Lancaster University, UK Networks, Governance and Economic Development represents one of the most authoritative compilations on the role of networks. The editors have brought together an impressive group of scholars who, from different disciplinary approaches, provide a fantastic overview of the key aspects in the governance of networks and on how they affect local economic development. Andrés Rodríguez-Pose, London School of Economics, UK This compact and authoritative book brings together the topical themes of networks and governance to advance understanding of the determinants of local economic development in the context of increasingly global relationships. Analyzing the governance of networks is critical in understanding how individual localities are able to promote development and consolidate positions within global production systems. In addressing such issues, this book accomplishes a significant bridging of disciplinary boundaries, incorporating different theoretical and empirical perspectives on the meanings and roles of territory, economic development and different forms of networks and governance. Networks, Governance and Economic Development brings together the analysis of leading researchers in their fields, following their interactions at a European Science Foundation exploratory workshop. The chapters will be an invaluable resource to researchers working in the fields of regional economic development, economic geography and economic policy as well as postgraduate students taking modules that specialize in aspects of the above themes.

Cinema has been long associated with France, dating back to 1895, when Louis and Auguste Lumi_re screened their works, the first public viewing of films anywhere. Early silent pioneers Georges MZli_s, Alice Guy BlachZ and others followed in the footsteps of the Lumi_re brothers and the tradition of important filmmaking continued

throughout the 20th century and beyond. In Encyclopedia of French Film Directors, Philippe Rège identifies every French director who has made at least one feature film since 1895. From undisputed masters to obscure one-timers, nearly 3,000 directors are cited here, including at least 200 filmmakers not mentioned in similar books published in France. Each director's entry contains a brief biographical summary, including dates and places of birth and death; information on the individual's education and professional training; and other pertinent details, such as real names (when the filmmaker uses a pseudonym). The entries also provide complete filmographies, including credits for feature films, shorts, documentaries, and television work. Some of the most important names in the history of film can be found in this encyclopedia, from masters of the Golden Age_Jean Renoir and RenZ Clair_to French New Wave artists such as Fran_ois Truffaut and Jean-Luc Godard. **Pamphlets on Protozoology (Kofoid Collection)** Wesleyan University Press

Résumé du compte-rendu des travaux du Laboratoire de Carlsberg Springer

Water is a limited natural resource indispensable for human existence. Water resources exist in the form of glaciers, oceans, rainwater, groundwater, and surface water. Uncontrolled population growth, urbanization, and inefficient management of natural resources have hastened the pace and impact of climate change. Floods and droughts related to climate change occur more frequently, destructing the livelihood of people and disrupting the fragile ecosystem. The need for conservation of available water resources and devising

strategies for resource management is very relevant in the current scenario and this book deals precisely with water resources and their management. It provides abundant and relevant information on all aspects related to water resources, including the need for conservation, water management strategies in different parts of the world, the impact of climate change on water management, pollution of water resources and treatment, and so forth. The book will motivate readers and scientists alike to look further and make concerted efforts towards promoting the preservation and conservation of water resources.
