Criminals attract an audience. People admire the sneakiness and creativity of the profession while cursing the dastardly outcomes. So why not have all of the tricks without the trade? Criminal Crafts brings together illicit behavior and artistic expression with dark humor in this do-it-yourself project book. Author Shawn Bowman focuses on original crafts and recipes themed in noir, murder, retro espionage, pulp fiction, mafia, and voodoo. Crafters and mischief lovers alike will love this book of 30 projects revolving around notorious criminals and their activities. From John Dillinger's soap gun to Bonnie Parker's gunshot poetry journal, readers will find themselves both amused and intrigued with the devious creativity. Not to mention how impressed party guests will be when they show up to Flaming Amy cocktails and cocktail bars stashed in violin cases. And just wait until you show off your shiv cozy! From the practical to the classically kitsch, Criminal Crafts are art projects readers will love. Some of Bowman's notorious crafts are available online at www.criminalcrafts.etsy.com, and you can follow Criminal Crafts at www.criminalcrafts.com and via Twitter and Facebook.

Irvine Arditti, der außergewöhnliche Geiger, Spezialist für Neue Musik und Primarius des phänomenalen Arditti Quartetts, und der Komponist und Dirigent Robert HP Platz haben sich zusammengetan, um über zeitgenössische Violintechniken zu schreiben. Detaillierte Erklärungen des technisch auf der Violine Möglichen werden hier für Interpreten, aber auch für Komponisten gegeben. Dabei wird die Virtuosität einer neuen Generation von Solisten berücksichtigt, die durch ihre außerordentlichen Fähigkeiten den Weg zu einem tieferen Verständnis sowohl von klassischer als auch von neuer Musik geebnet haben. Die Kapitel zur Bogentechnik, zum Vibrato, Pizzicato, Glissando, zu Flageolets, Tabulaturen, zum Rhythmus und zu speziellen Aspekten der elektronischen Klangerzeugung werden durch zahlreiche anschauliche Notenbeispiele und Schemata illustriert. Besonders hilfreich sind die Videoaufnahmen, auf die aus dem eBook heraus verlinkt wird. Darin realisiert und erläutert Arditti selbst die im Buch beschriebenen Techniken auf der Geige. Kapitel zu den Grundlagen der Violintechnik und zu Irvine Ardittis ganz persönlichen Erfahrungen mit namhaften Komponisten machen das Buch auch für Nicht-Geiger interessant.

"Fascinating. Doidge's book is a remarkable and hopeful portrait of the endless adaptability of the human brain."—Oliver Sacks, MD, author of *The Man Who Mistook His Wife for a Hat* What is neuroplasticity? Is it possible to change your brain? Norman Doidge's inspiring guide to the new brain science explains all of this and more An astonishing new science called neuroplasticity is overthrowing the centuries-old notion that the human brain is immutable, and proving that it is, in fact, possible to change your brain. Psychoanalyst, Norman Doidge, M.D., traveled the country to meet both the brilliant scientists championing neuroplasticity, its healing powers, and the people whose lives they've transformed—people whose mental limitations, brain damage or brain trauma were seen as unalterable. We see a woman born with half a brain that rewired itself to work as a whole, blind people who learn to see, learning disorders cured, IQs raised, aging brains rejuvenated, stroke patients learning to speak, children with cerebral palsy learning to move with more grace, depression and anxiety disorders successfully treated, and lifelong character traits changed. Using these marvelous stories to probe mysteries of the body, emotion, love, sex, culture, and education, Dr. Doidge has written an immensely moving, inspiring book that will permanently alter the way we look at our brains, human nature, and human potential.

The Violin Makers' Journal

Thomas D. Rossing String instruments are found in almost all musical cultures. Bowed string instruments form the backbone of symphony orchestras, and they are used widely as solo instruments and in chamber music as well. Guitars are used universally in pop music as well as in classical music. The piano is probably the most versatile of all musical instruments, used widely not only in ensemble with other musical instruments but also as a solo instrument and to accompany solo instruments and the human voice. In this book, various authors will discuss the science of plucked, bowed, and hammered string instruments as well as their electronic counterparts. We have tried to tell the fascinating story of scientific research with a minimum of mathematics to maximize the usefulness of the book to performers and instrument builders as well as to students and researchers in musical acoustics. Sometimes, however, it is difficult to "translate" ideas from the exact mathematical language of science into words alone, so we include some basic mathematical equations to express these ideas. It is impossible to discuss all families of string instruments. Some instruments have been researched much more than others. Hopefully, the discussions in this book will help to encourage further scientific research by both musicians and scientists alike. 1.1 A Brief History of the Science of String Instruments Quite a number of good histories of acoustics have been written (Lindsay 1966, 1973; Hunt 1992; Beyer 1999), and these histories include musical acoustics.
