The 1956 Suez Crisis is the first example of a pre-emptive strike after World War II. The episode provides lessons about the lengths to which nations will go to secure their interests and the limits of the United Nation's influence. How the UN uses its power is the point of contention. In 1956, Great Britain, France, and Israel believed the organization would protect their security interests through the unbiased maintenance of international law. Yet, as common in the Cold War, UN action was hampered. A war began and ended with a cease-fire in fifty-five hours. Three militarily superior armies won their tactical fights but were strategically defeated. Most notably, the influence of global authority shifted to the superpowers. Through all this, the UN changed its mission and purpose. The primary question therefore is did the UN resolve the 1956 Suez Crisis? Resolution had to include a status quo ante bellum, the return to the existing system before the war, or the recognition of a new international Regime. The UN's ability to resolve such crises directly affects its legitimacy in the international community.

This book explores the intersection of craft, design and sustainability in the developing world. It argues that most sustainable design approaches and efforts fall short of implementing holistic sustainability, and in order to reach this goal, design must be underpinned by alternatives to the mainstream, technology-intensive, industrial design paradigm. Renewable materials such as bamboo, cork and hemp – which are abundantly available in the developing world – have the potential to be a viable resource base for sustainable development. Current sustainable design initiatives and approaches already recontextualize these materials using industrial techniques and technologies. However, these efforts fall short of impacting holistic sustainability and tend to focus on the ecological aspect. This book offers the development of one alternative to design for holistic sustainability, called the Rhizome Approach, which draws on existing sustainability praxis and craft. Holistic Sustainability Through Craft-Design Collaboration includes customizable tools which aim to empower designers to guide and evaluate their own designs. Through these tools, and the Rhizome Approach in general, the book aims to enable designers, and students of design, to move beyond green and sustainable design, to holistic sustainability design.
