Functional Movement Development Across the Life Span - E-Book  
Elsevier Health Sciences

This book describes validated outcome measures for the international Spinal Cord Injury population. Based on rigorous systematic reviews of ca. 80,000 scientific articles, the authors present assessment tools for various clinical uses in the health sciences, following parameters of validity, reliability, and responsiveness. It is important for the development of clinical practice and research that practical and appropriate measures become universally accepted; this would allow comparisons and meta-analysis of high-quality randomized controlled trials of people with this increasingly common injury. This book emphasizes the need for consensus among researchers as to which tools must be studied in depth or adapted to other national contexts, or which measurement instruments should be standardized in order to develop universal norms and standards for the performance of people with Spinal Cord Injury. It offers a valuable practical guide for clinicians, rehabilitation professionals and nurses, but will also help researchers to gain more confidence in using valid and reliable

assessment tools for comparable clinical trials.

A Doody's Core Title 2012 *Spasticity: Diagnosis and Management* is the first book solely dedicated to the diagnosis and treatment of spasticity. This pioneering work defines spasticity in the broad context of Upper Motor Neuron Syndrome and focuses not on a single component, but on the entire constellation of conditions that make up the UMNS and often lead to disability. *Spasticity: Diagnosis and Management* clearly defines the process for the diagnosis of spasticity, the basic science behind its pathophysiology, the measurement tools used for evaluation, and reviews the available treatment options. Divided into five sections, this comprehensive

clinical resource provides a roadmap for assessing the complicated picture of spasticity and choosing the appropriate interventions. Therapies including oral medications, intrathecal baclofen, botulinum toxin and phenol, and surgical options are thoroughly discussed, as are non-medical therapies and the role of the emerging technologies. The full spectrum of diseases involving spasticity in adults and children and the unique diagnostic and management challenges they present is addressed by experienced clinicians. This text is a one-stop source for physicians, therapists and other members of the spasticity management team tasked with the goal of improving patient care and outcomes. Special Features of Spasticity: Diagnosis and Management include In-depth coverage of diagnoses, interventions, and outcomes across multiple pathologies Tools and clinical measurements for patient assessment Treatment-focused chapters outlining current medical and other therapeutic options Illustrated review of limb anatomy Hands-on guidance to chemodeneration techniques with botulinum toxin and phenol, and ITB management Disease-based chapters devoted to the full range of clinical conditions involving spasticity in adults and children Multidisciplinary perspective supporting a team approach to care

Complete & accurate documentation is one of the essential skills for a physical

therapist. This book covers all the fundamentals & includes practice exercises & case studies throughout. **Clinical Trials in Neurology** Elsevier Health Sciences

An invaluable resource for health professionals and students engaged in research, this thoroughly updated edition provides a guide to the major measures of health and functioning. Measures of subjective health, well-being and quality of life are introduced along with analysis of their validity and reliability and the evidence for using each one. Throughout the book each measure is explained with a summary of how each one is scored and used, making this a one-stop guide to understanding health measurements, and the basic concepts behind measuring health, quality of life and well-being. • A new look and feel makes measures and scales easier to locate • Further research and evidence provides a greater critique of the measures • Useful source information to help you access each measure with permission • The addition of new scales include the Warwick-Edinburgh Wellbeing Scale, the Older People's Quality of Life Scale and the Short-Form McGill Pain Questionnaire • Expanded material on functional independence and functional assessment measures Written by a renowned expert in health research, *Measuring Health, 4th edition* is essential reading for researchers and upper level undergraduates and postgraduates in health services research, health studies, health sciences, public health and social sciences. "The world of measurement scales, which ones to use and for what purpose, is a complex one even for experienced qualitative researchers. It is easy for less experienced researchers to lose their way. Ann Bowling's book provides an up to date and coherent guide and assessment of measurement tools which is comprehensible and well organised." Virginia Berridge, Professor of History and Director, Centre for History in Public Health, London School of Hygiene and Tropical Medicine, UK "In her latest edition of *Measuring Health: A Review of Subjective Health, Well-Being and Quality of Life Measurement Scales*, Professor Ann Bowling has, once again, provided us with an essential for our bookshelves. It is a

vital resource for anyone investigating health and well-being – whether novice student researcher or experienced academic. Written in an accessible, easy to use style, we are initially taken through the importance of measuring and understanding lay people's experiences of their physical and social health. The mechanics and challenges of measurement of subjective health are then described. Later chapters include handy definitions of relevant concepts and detailed descriptions of specific scales – both familiar and relatively new ones – including psychometric testing and use. This text is packed with useful information and can be used both as a resource for an overall understanding of measuring health and well-being or for selecting specific patient-based health scales for research projects." Dr. Nan Greenwood, Reader in Health and Social Care Service Research, St George's University of London and Kingston University, UK
