the equipment which fall in this category are

hand tools, power tools and tractors. There are
different types of farm machinery such as
combine harvesters, tillage implements and
planters. Machines are also used to deliver
fertilizers and pesticides. Some of the diverse
technologies used for agricultural purposes are
computer monitoring systems, GPS locators
and self-steer programs that are used in tractors
that use less fuel and do not waste seeds or
fertilizer. The topics included in this textbook
on agricultural machinery and technologies are
of utmost significance and bound to provide
incredible insights to readers. While
understanding the long-term perspectives of the
topics, it makes an effort in highlighting their
impact as a modern tool for the growth of this

field. This book will provide comprehensive
knowledge to the readers.

The agricultural industry is dealing with enormous challenges across the globe, including the limited availability of arable lands and fresh water, as well as the effect of climate change. Machinery plays a crucial role in agriculture and farming systems, in order to feed the world's growing population. In the last decade, we have witnessed major advances in agricultural machinery and technologies, particularly as manufacturers and researchers develop and apply various novel ways of automation as well as the data and information gathering and analyzing

capabilities of their machinery. This book presents the state-of-the-art information on the important innovations in the agricultural and horticultural industry. It reviews and presents different novel technologies and implementation of these technologies to optimize farming processes and food production. There are four sections, each addressing a specific area of development. Section I discusses the recent development of farm machinery and technology. Section II focuses on water and irrigation engineering. Section III covers harvesting and post-harvest technology. Section IV describes computer modelling and simulation. Each section highlights current industry trends and latest research progress. This book is ideal for those working in or are associated with the fields of agriculture, agri-food chain and technology development and promotion.
