Business structures, employment relationships, job characteristics, and worker outcomes have changed in the United States over the last few decadesâ€”in some ways unpredictably. A high level of interest exists among policy makers and researchers in addressing concerns about the future of work in the United States. These concerns are heightened by the perceived fracturing of relationships between workers and employers, the loss of safety net protections and benefits to workers, the growing importance of access to skills and education as the impacts of new technologies and automation are felt, and the market-based pressure that companies face to produce short-term profits, sometimes at the expense of long-term value. These issues, as well as related ones such as wage stagnation and job quality, are often associated with alternative work arrangements (AWAs)â€”which include independent-contractor and other nonemployee jobs, work through intermediaries such as temporary help agencies and other contract companies, and work with unpredictable schedulesâ€”although they also pertain to many standard jobs. A better understanding of the magnitude of and trends in AWAs, along with the implications for job quality, is needed to develop appropriate policies in response to the changing nature of work. Measuring Alternative Work Arrangements for Research and Policy reviews the Contigent Worker Supplement (CWS) of the Current Population Survey (CPS) for the Bureau of Labor Statistics (BLS) in the U.S.

Department of Labor. The CWS provides key measures of temporary (contingent) work, alternative work arrangements, and the "gig" economy. Disagreements, however, exist among researchers, policy makers, and other stakeholders about the definitions and measures of these concepts and priorities for future data collection. The report also reviews measures of employment, earnings, and worker well-being in temporary and alternative work arrangements that can be estimated using household survey data, such as those generated by the CWS, as well as measures that can be produced using administrative, commercial, and combined data sources. The comparative advantages and complementarities of different data sources will be assessed, as well as methodological issues underpinning BLS's measurement objectives.

Measuring Youth Well-being Bushra Arshad

The use of the cognitive interviewing method for survey question testing has proliferated and evolved over the past 30 years. In more recent years the method has been applied to the evaluation of information letters and leaflets and to research consent forms. This book provides a practical handbook for implementing cognitive interviewing methods in the context of applied social

policy research, based on the approach used by the authors at the NatCen Social Research (NatCen) where cognitive interviewing methods have been used for well over a decade. The book provides a justification for the importance of question testing and evaluation and discusses the position of cognitive interviewing in relation to other questionnaire development and evaluation techniques. Throughout the book, the focus is on providing practical and hands-on guidance around elements such as sampling and recruitment, designing probes, interviewing skills, data management and analysis and how to interpret the findings and use them to improve survey questions and other documents. The book also covers cognitive interviewing in different survey modes, in cross national, cross cultural and multilingual settings and discusses some other potential uses of the method.

This volume presents key findings from the EU funded Measuring Youth Well-being (MYWeB) project which assessed the feasibility of a European Longitudinal Study for Children and Young People (ELSCYP). It draws on the original empirical data from a panel of experts in the field of child well-being as well as field experiences from a number of European countries. MYWeB explored strategies and methodological challenges for involving children and young people in well-being research in order to fight poverty and social exclusion. It does so by evaluating different options to measure the well-being of children and young people across Europe using a child centric approach. Written by experts researching children and young people from a variety of disciplinary backgrounds in the areas of sociology, psychology, political science, education, philosophy, economics, social policy, and evaluation.
