A Practical Guide to Prevention and Treatment of Complications during Transcatheter Aortic Valve Implantation
Calcific aortic stenosis (AS) is the most common heart valve anomaly, with a largely age-dependent prevalence, a calculated annual incidence rate in

the range of 4-5% in general populations and up to 6% in patients aged 75 years and over. Surgical aortic valve replacement (SAVR) was previously the only option available to patients with symptomatic, severe aortic stenosis. After the first-in-human transcatheter aortic valve implantation (TAVI) was performed by Alain Cribier in 2002, the treatment strategy for patients with symptomatic AS has been revolutionized. Since then, TAVI has grown exponentially, as a result of accruing evidence demonstrating safety and efficacy, and reduced invasiveness compared with SAVR. TAVI devices are continuously expanding to include several valve design options. As this strategy is continuously evolving to treat younger patients and lower-risk populations, aside from the long-term durability of the valve systems, procedural safety will become the focus of newer-generation devices. This book is a practical handbook devoted to the optimization of TAVI procedures, through a focused containment of complications. Through

an integrated evaluation of the clinical status, imaging techniques and laboratory findings, the authors provide readers with clear messages on preventive and therapeutic recommendations.

Atlas of Human Anatomy Minnesota Historical Society The narrative in this book is a reflective review of the dispossession and displacement that befell the author's generation and their families in the aftermath of the 1948 Palestinian Nakba, and the struggle to move forward against all odds. Through a series of particular events that the author calls "Glimpses," he relates how he was able to overcome challenges that he and his family faced to ultimately become a world-renowned physician. Although the book weaves stories from the author's life, it does not fall neatly within the traditional genre of a "memoir." Instead,

the author reflects on a series of encounters and individuals that created the connective web which shaped his life and career, and an educational institution (the American University of Beirut) that was centered on a motto ("To have life and to have it more abundantly") that guided him through both difficulties and successes. In so doing, he reminds us that human connection, family, generosity, and faith in what is possible will always defeat bigotry and oppression, and that acts of kindness create ripples that change worlds.
