The Nation's Largest Retailer wanted the largest headquarters in the nation, and they got it -- in spades. Designed by Skidmore, Owings & Merrill (SOM), the 110-story, anodized aluminum-clad Sears Tower occupies three acres in the West Loop. The bundled-tube construction allowed for more windows and more corner offices per square foot. The total area within the Tower is 4.4 million square feet; the Sky Deck on the 103rd floor offers tremendous views and welcomes more than 1 million visitors yearly. When SOM realized that their design was only ten stories short of what was supposed to be the record-breaking height of the World Trade Center then under construction (1,368 feet), they broke the record, coming in at 1,454 feet. The move of Sears and Roebuck employees into the Tower was the biggest corporate move in American history. In the late 1980s Sears and Roebuck left the building, but it continues to thrive, a timeless monument to American ingenuity.

This lively guidebook surveys four hundred buildings within the Atlanta metropolitan area--from the sleek marble and glass of the Coca-Cola Tower to the lancet arches and onion domes of the Fox Theater, from the quiet stateliness of Roswell's antebellum mansions to the art-deco charms of the Varsity grill. Published in conjunction with the Atlanta chapter of the American Institute of Architects, it combines historical, descriptive, and critical commentary with more than 250 photographs and area maps. As the book makes clear, Atlanta has two faces: the "Traditional City," striving to strike a balance between the preservation of a valuable past and the challenge of modernization, and also the "Invisible Metropolis," a decentralized city shaped more by the isolated ventures of private business than by public

---

intervention. Accordingly, the city's architecture reflects a dichotomy between the northern-emulating boosterism that made Atlanta a boom town and the genteel aesthetic more characteristic of its southern locale. The city's recent development continues the trend; as Atlanta's workplaces become increasingly "high-tech," its residential areas remain resolutely traditional. In the book's opening section, Dana White places the different stages of Atlanta's growth--from its beginnings as a railroad town to its recent selection as the site of the 1996 Summer Olympics--in their social, cultural, and economic context; Isabelle Gournay then analyzes the major urban and architectural trends from a critical perspective. The main body of the book consists of more than twenty architectural tours organized according to neighborhoods or districts such as Midtown, Druid Hills, West

End, Ansley Park, and Buckhead. The buildings described and pictured capture the full range of architectural styles found in the city. Here are the prominent new buildings that have transformed Atlanta's skyline and neighborhoods: Philip John and John Burgee's revivalist IBM Tower, John Portman's taut Westin Peachtree Plaza, and Richard Meier's gleaming, white-paneled High Museum of Art, among others. Here too are landmarks from another era, such as the elegant residences designed in the early twentieth century by Neel Reid and Philip Shutze, two of the first Atlanta-based architects to achieve national prominence. Included as well are the eclectic skyscrapers near Five Points, the postmodern office clusters along Interstate 285, and the Victorian homes of Inman Park. Easy-to-follow area maps complement the descriptive entries and photographs; a

bibliography, glossary, and indexes to buildings and architects round out the book. Whether first-time visitors or lifelong residents, readers will find in these pages a wealth of fascinating information about Atlanta's built environment. *Design for Good City Design Center* From the American Institute of Architects comes a definitive overview of the architectural landmarks of Chicago, the birthplace of modern architecture, offering a detailed description of more than one thousand diverse buildings, along with suggested walking or driving tours. context of contemporary Miami and Miami Beach. By presenting the built environment of the Miami area for its compelling variety and unique mélange of styles, the authors go far in interpreting a long overlooked portion of our continent."--Gregory W. Bush, coauthor of *Miami: An American Crossroad* A major urban center perched between vast natural ecosystems, Miami is known for a strikingly diverse built environment that is barely 100 years old. Within this brief span, the city has constantly reinvented itself, seeking a tangible identity as Florida's largest metropolis. In this invented landscape, architecture, landscape design, and urban planning have played a particularly important role in creating Miami's modern

character and unique identity. Miami Architecture grew out of the Miami Architecture Project, a community-based, nonprofit association that organized more than a dozen local forums to develop deeper appreciation of architecture and the role of architecture in community revitalization. Ideal for residents, professionals, vacationers, and day-trippers, this authoritative guidebook provides a broad, accessible architectural overview of the notable buildings that can be found in the core of downtown Miami, Miami Beach, and Coconut Grove.

Gardening is rich in tradition, and many gardens are explicitly designed to refer to or honor the past. But garden design is also rich in innovation, and in *The Making of Place* John Dixon Hunt explores the wide varieties of approaches, aesthetics, and achievements in garden design throughout the world today. The gardens Hunt explores offer surprising new ideas about how we can carve out a space for respite

in nature. Taking readers to gardens public and private, busy and hidden away, to botanical gardens, small parks, university campuses, and vernacular gardens, Hunt showcases the differences between cultures and countries around the globe, including the United States, United Kingdom, France, Germany, China, and Australia. Richly illustrated, *The Making of Place* is sure to enchant and inspire even the most modest of home gardeners.

"On Loos, Ornament and Crime" is the most controversial of the essays in the series entitled "Columns of Smoke," in which Professor Juan Jose Lahuerta undertakes an acute and thoroughly documented rereading of modernity, linking the ideas of architecture and ornamentation and exploring the ways these have been treated in print. In the previous volume of this series Lahuerta exploded clichés with his penetrating analysis of Loos's

relationship with photography, and here he examines in fine detail the architect's written work, and in particular the texts that engage with architectural and artistic theory and continue the classical tradition of Schinkel, Semper and Riegl an allegiance readily apparent in Loos's architecture. Lahuerta also discusses other articles in which Loos confronted his fellow architects over issues far removed from their shared profession, and shows us with tellingly insightful examples how 'Ornament and Crime', the founding essay of modernity that established "disornamentation" as the signal feature of twentieth-century architecture and culture, belongs to this second category. The "ornament" that Loos criminalizes, in language charged with the vocabulary of criminal anthropology and bioevolutionism of Max Nordau and Cesare Lombroso, has less

---

to do with the decoration of buildings than with the tattoos, beads and feathers of 'primitives' and "degenerates" women, Papuans, artists and criminals. Lahuerta traces Loos's adoption of pseudo-scientific beliefs that shaped the culture of the early twentieth century, and in so doing dismantles the historical value accorded to his famous text, which in this reading takes on a deeply disturbing significance. The Robie House in Chicago is one of the world's most famous houses, a masterpiece from the end of Frank Lloyd Wright's early period and a classic example of the Prairie House. This book is intended as a companion for the visitor to the house, but it also probes beneath the surface to see how the design took shape in the mind of the

architect. Wright's own writings, rare working drawings from the period, and previously unpublished photographs of the house in construction help the reader look over the shoulder of the architect at work. Beautiful new photographs of the Robie House and related Wright houses have been specially taken to illustrate the author's points, and a bibliography on Wright is provided.

An illustrated guide to the monumental and non-monumental final resting places of famous architects from Aalto Alvar to Frank Lloyd Wright. All working architects leave behind a string of monuments to themselves in the form of buildings they have designed. But what about the final spaces that architects themselves will occupy? Are

architects' gravesites more monumental—more architectural—than others? This unique book provides an illustrated guide to more than 200 gravesites of famous architects, almost all of them in the United States. Led by our intrepid author, Henry Kuehn, we find that most graves of architects are not monumental but rather modest, that many architects did not design their final resting places, and that a surprising number had their ashes scattered. Architects' Gravesites offers an alphabetical listing, from Alvar Aalto and Dankmar Adler (Louis Sullivan's partner) to Frank Lloyd Wright and Minoru Yamasaki (designer of the World Trade Center's twin towers). Each entry includes a brief note on the architect's career and a color photograph of the site.

For example, Ludwig Mies van der Rohe is buried in Chicago under a simple granite slab designed by his architect grandson; Louise Bethune, the first American woman to become a professional architect, is buried under a headstone inscribed only with her husband's name (a plaque honoring her achievements was installed later); Philip Johnson's ashes were spread in his rose garden, with no marker, across the street from his famous Glass House; and the grave of Pierre L'Enfant in Arlington National Cemetery offers a breathtaking view of Washington, D.C., the city he designed. Architects' Gravesites is an architectural guide like no other, revealing as much about mortality as about monumentality.

In Living Landmarks of Chicago, Emmy-winning Author Theresa L. Goodrich goes beyond the what, when, and where to tell the how and why of fifty Chicago landmarks. From the parlor used as a meat locker to the fight over the Field Museum, history comes to life in these tantalizing tales. Each chapter is a vignette that introduces the landmark and brings it to life, and the book is organized chronologically to illustrate the development of the city's distinct personality. These fifty landmarks weave an interconnected tale of Chicago between 1836 and 1932 (and beyond).

Philosophy for Architects is an engaging and easy-to-grasp introduction to philosophical questions of interest to students of architectural theory. Topics include Aristotle's theories of "visual imagination" and their relevance to digital design, the problem of optical correction as explored by Plato, Hegel's theory of zeitgeist, and Kant's examinations of space and aesthetics, among others. Focusing primarily on nineteenth- and twentieth-century philosophy, it provides students with a wider perspective concerning philosophical problems that come up in contemporary architectural debates.

Differences brings together ten essays written over the past decade by the distinguished Spanish architect and theorist Ignasi de Solà-Morales. Differences brings together ten essays written over the past decade by the distinguished Spanish architect and theorist Ignasi de Solà-Morales. Many of the essays have never previously been translated, and the author has provided a new introduction especially for this English edition. Contemplating the panorama of contemporary art and architecture, de Sola-Morales posits that there is no one way to describe today's practice; instead he concentrates on elucidating the present dynamic of contrast, diversity, and tension. In an unorthodox

ofpairing, de Sola-Morales derives his inspiration from both phenomenology and Deleuzean poststructuralism. Combining these philosophical inheritances allows him to reinvoke the human subject without referring to classical humanism or announcing the death of the object. His retrospective review of the disciplines of art and architecture, particularly as they have developed since World War II, provokes him to design, draft, and ultimately build a description of Modernism's lineage of subjectivity. The result is a provocative construction of fluid "topographies" that articulate, rather than depict, the shaky ground on which our current artistic and architectural production rests.
