A perennial bestseller by eminent mathematician G. Polya, *How to Solve It* will show anyone in any field how to think straight. In lucid and appealing prose, Polya reveals how the mathematical method of demonstrating a proof or finding an unknown can be of help in attacking any problem that can be "reasoned" out—from building a bridge to winning a game of anagrams. Generations of readers have relished Polya's deft—indeed, brilliant—instructions on stripping away irrelevancies and going straight to the heart of the problem.

Mangroves are typically tropical coastal ecosystems found in the inter-tidal zones of river deltas and back water areas. They represent highly dynamic and fragile ecosystems, yet they are the most productive and biologically diversified habitats of various life forms including plants, animals and microorganisms.

Mangroves are a resource of many different products, including; microorganisms that harbor a diverse group of industrially important enzymes, antibiotics, therapeutic proteins and vaccines; timber resistant to rot and insects; and medicinal plants. Divided into three main parts, *Biotechnological Utilization of Mangrove Resources* first provides a broad introduction into mangrove ecology. Subsequent chapters discuss the biodiversity of mangroves, including the diverse nature of the organisms within the mangroves themselves. The final part pays special attention to biotechnological utilization of mangroves. Topics such as antimicrobial activity of mangrove-derived products, anti-oxidant activity of mangrove derived products and pharmaceutical applications, are covered in detail. *Biotechnological Utilization of Mangrove Resources* brings the latest research and technologies in mangrove biology into one platform, providing readers with an up-to-date view on the area. This would serve as an excellent reference book for researchers and students in the field of marine biology especially interested in mangrove ecosystems. Highlights the diversity of different life forms in the mangrove ecosystem, including the importance of mangroves and mangrove-derived products. Focuses on biotechnological utilization of mangrove resources such as antimicrobial and antioxidant properties of microorganisms, and industrial and pharmaceutical applications. Discusses the different modern tools and techniques used for the study of mangrove resources

El currículum constituye un campo de estudio privilegiado para acercarse a la comprensión de la realidad educativa, para evidenciar concepciones por ejemplo, sobre qué es en nuestro días la

información y el conocimiento que deben ser transmitidos y cómo debe hacerse así como distintas opciones y puntos de vista. En él se cruzan teorías, pero también cursos de acción, decisiones políticas y organizativas, utilización de materiales curriculares, etc., y sobre él intervienen una variedad de agentes (instituciones oficiales, centros educativos, profesorado, etc.) que producen transformaciones significativas en el desarrollo de los planes iniciales previstos y declarados. El carácter conflictivo, polémico de la educación y del currículum se evidencian, particularmente, en sociedades democráticas plurales que afrontan un futuro lleno de incertidumbres. Esta obra recoge una selección de textos sobre el currículum que abordan temas como: La inseguridad y el conflicto en la educación. La complejidad de la educación obligatoria, que debe afrontar la enorme diversidad social, cultural e individual de las personas en una escolaridad que sea igualadora. Cómo debería ser el currículum de los niveles obligatorios del sistema educativo, en una sociedad en la que la información y el conocimiento se han diversificado muchísimo y crecen exponencialmente. Los ámbitos donde tiene lugar la planificación de la acción educativa, en particular el político, el del centro educativo y el del aula.

Estudiar la sociedad es una tarea apasionante. La sociología es una de las ciencias que se encarga de este cometido. Existen otras ciencias que comparten el interés por la sociedad como la psicología social, la ciencia política o la antropología cultural, aunque "es seguramente la sociología la que mira a la sociedad desde un punto de vista más general". Cuando los sociólogos hablan de social o sociedad adoptan una perspectiva con dos dimensiones.

These three volumes constitute the first complete English translation of Felix Klein's seminal series "Elementarmathematik vom höheren Standpunkte aus". "Complete" has a twofold meaning here: First, there now exists a translation of volume III into English, while until today the only translation had been into Chinese. Second, the English versions of volume I and II had omitted several, even extended parts of the original, while we now present a complete revised translation into modern English. The volumes, first published between 1902 and 1908, are lecture notes of courses that Klein offered to future mathematics teachers, realizing a new form of teacher training that remained valid and effective until today: Klein leads the students to gain a more comprehensive and methodological point of view on school mathematics. The volumes enable us to understand Klein's far-reaching conception of elementarisation, of the "elementary from a higher standpoint", in its implementation for school mathematics./div This volume II presents a paradigmatic realisation of Klein's approach of elementarisation for teacher education. It is shown how the various geometries, elaborated particularly since the beginning of the 19th century, are revealed as becoming unified in a new restructured geometry. As Klein liked to stress: "Projective geometry is all geometry". Non-Euclidean geometry proves to constitute a part of this unifying process. The teaching of geometry is discussed in a separate chapter, which provides moreover important information on the history of geometry teaching and an international comparison.
