The Regulation of Animal Health and Welfare draws on the research of scientists, lawyers, economists and political scientists to address the current and future regulatory problems posed by the issues of animal health and disease. Recent events such as the outbreak of mad cow disease, epidemics of foot and mouth disease, concerns about bluetongue in sheep, and the entry into the food chain of the offspring of cloned cattle, have heightened awareness of the issues of regulation in animal disease and welfare. This book critically appraises the existing regulatory institutions and guiding principles of how best to maintain animal health in the context of social change and a developing global economy. Addressing considerations of sound science, the role of risk management, and the allocation of responsibilities, it also takes up the theoretical and practical challenges which here – and elsewhere – attend the co-operation of scientists, social scientists, lawyers and policy makers. Indeed, the collaboration of scientists and social scientists in determined and regulatory contexts such as that of animal disease is an issue of ever-increasing importance. This book will be of considerable value to those with interests in this issue, as well as those concerned with the law and policy relating to animal health and welfare.

Carl Sims, a young virologist, discovers a plot hatched by a group of international scientists to cull, in a matter of weeks, two-thirds of the world's population - some 4.5 billion people, by releasing a deadly virus that kills two-thirds of those it infects. Their goal is to reduce Earth's population from an unsustainable seven billion to two billion. What is he to do? Try to stop the conspiracy, or join it? Horrific, yes, but what if this culling could prevent the extinction of some forty percent of our planet's flora and fauna? Or if he was certain it was the only way to prevent an even larger human die-off, incurring significantly more suffering, by the end of this century? Or if he were convinced it represented the only hope for humanity surviving at all? This is at the heart of this thriller, for these viruses do, in fact, exist. Most everything that plagues mankind today - the highest concentration of atmospheric CO2 in 3 million years, escalating extinction rates, habitat loss, fishery collapses, climate change, polar and glacial ice thaws, arable land loss, desertification, aquifer depletions, ocean acidification, unprecedented air pollution, looming famine and social unrest - stems from over consumption which, unchecked, will lead to Earth's sixth mass extinction event. "Robert Johnson's first novel tackles an issue that most in the media, the arts, and entertainment industry--even the environmental

community--are afraid to discuss directly: overpopulation. Despite the potential for despair or preachy diatribes, the gravity of the issues is woven into the story with plenty of colorful characters, gallows humor and a suspenseful plot that unravels across continents, making for an entertaining and thought-provoking debut." --New York Journal of Books "This is so real, it is frightening, although the characters are fictional, the story is possible--and very likely. The book will keep you awake nights, thinking about our vulnerability, and worried that we've already gone too far for the planet to survive without a culling." --Pulp Den "Johnson's debut thriller could be more science fact than science fiction. There's a scheme afoot by rogue scientists to release a virulent flu virus and kill two-thirds of Earth's population, a megalomaniacal plot to save the planet from becoming a lifeless rock due to climate change and overpopulation. A scary premise. Get a flu shot. Wash your hands regularly." --Kirkus

"A highly imaginative book, The Cull races at an electric pace, with deep characters and a mesmerizing story line. A must read for horror buffs." -Anu Deshpande, Recording Artist Four dead bodies in an abandoned San Francisco warehouse is nothing unusual for SFPD Homicide inspector Katie Conner. But the two terrified children, unharmed and locked in elaborate cages, tends to pique her curiosity. A little time and a lot of research put Katie in touch with a New York detective with cases bearing almost identical circumstances except he has eight cases with twelve rescued children and fourteen dead bodies. Someone is killing well-dressed, affluent men, leaving their bodies next to children locked in a variety of cages, then calling in the locations to the police. When Katie catches up with the shooter, he exposes her to a terrifying truth, the truth that humans exist alongside a parallel species, one that believes that humans are not, nor have ever been, at the top of the food chain. Katie will come face to face with a secret sect of ancient, powerful creatures, virtually indistinguishable from humans, and only her wits and courage will stand between her and the destruction of everyone she loves.

When Earth is conquered by a technologically superior race called the Grath, humanity is forced to work--and fight--for them. But not all humans are content to submit to their masters... When Earth is conquered by a technologically superior race called the Grath, humanity is forced to work--and fight--for them. But not all humans are content to submit to their masters... While the rest of humanity is forced to toil away their lives in dank factories building equipment for the alien war machine of the Grath, Jason Cull and a select few are being trained to help fight battles in place of their masters. According to the Academy's brochures, Jason should be one of the best and the brightest the human race has to offer. So why does he feel decidedly average? As graduation and the impending trials of war close in, Jason and his closest friends find themselves kidnapped by forces with radically different plans. Thrown into the midst of a resistance movement that demands him to fight against the Grath instead of alongside them, Jason begins the process of proving himself all over again.

In 2020, intelligent malware infects and destroys the digital circuitry that nearly 8 billion humans depend on--only those with both wisdom and strength survive the cull that results. By 2050, a shrunken populace has learned to depend on its wits and smart dogs, instead of infrastructure and smartphones. With a new clue in his pocket, treasure hunter Pro is on his mission of discovering the fabled "Lost Retreat" when slavers chase spear-toting, raven-haired Kenai and her dog, O3, across his path. While Pro and Kenai deal with the best and worst of desperation's effects on humanity, human history is set to repeat itself. This time advanced technology emerges from bunkers instead of wooden ships, but its allure to the indigenous people remains strong. A war ensues as Pro, Kenai, and other cull survivors are forced to choose between living on the edge but free, or submitting to governmental control for security and the supposed good of the species.

Former mercenary, Sonja Kurtz, is hired by business tycoon, Julia Clyde-Smith, to head an elite squad. Their aim is to take down Africa's top poaching kingpins and stop at nothing to save its endangered wildlife. But as the body count rises, it becomes harder for Sonja and her team to stay under the radar. When her former flame, safari guide and private investigator Hudson Brand, is hired to investigate the death of an alleged poacher, Sonja is forced to ask herself if Julia's wildlife crusade has gone too far. As the investigation deepens it becomes increasingly apparent that an underworld syndicate, the Scorpions, are pulling the strings behind Africa's poaching epidemic. Just as Julia is intent on wiping out poaching, the Scorpions are concentrating on taking out the women who stand in their way.

New technologies have opened up fresh possibilities for public diplomacy, but this has not erased the importance of history. On the contrary, the lessons of the past seem more relevant than ever, in an age in which communications play an unprecedented role. Whether communications are electronic or hand-delivered, the foundations remain as valid today as they ever have been. Blending history with insights from international relations, communication studies, psychology, and contemporary practice, Cull explores the five core areas of public diplomacy: listening, advocacy, cultural diplomacy, exchanges, and international broadcasting. He unpacks the approaches which have dominated in recent years – nation-branding and partnership – and sets out the foundations for successful global public engagement. Rich with case studies and examples drawn from ancient times through to our own digital age, the book shows the true capabilities and limits of emerging platforms and

technologies, as well as drawing on lessons from the past which can empower us and help us to shape the future. This comprehensive and accessible introduction is essential reading for students, scholars, and practitioners, as well as anyone interested in understanding or mobilizing global public opinion.

When the world died, we were torn apart. He's an old soldier, of a sort – be polite and say he 'solved problems' for his government. She's a doctor, a scientist specialising in rare diseases. They met once, fell in love, got ready to settle down... until the Cull came and tore them apart. They've hunted each other across the ravaged, ruined world, leaving bloodshed and destruction in both their wakes. Finally, tonight, in an old Army research post in the middle of nowhere, they'll be reunited. With any luck, it'll live up to the promise. Children of the Cull continues the stories of Simon Spurrier's *The Cull* and Rebecca Levene's *Kill or Cure*.
