"THE MOST UNLIKELY OF PEOPLE, IN THE MOST IMPROBABLE OF CIRCUMSTANCES, CAN BECOME EXTRAORDINARY." WE NEED MORE LEADERS. From socio-political chaos and workplace disruption to the climate change crisis, we have never needed people with the skill and will to collaborate to create a better world more than now. We need people who are willing to fill the leadership void. People who will embrace the influence they have. People who believe in improving society and workplace culture - not only because it makes life better, but because it is proven to yield positive results. *The Promises of Giants* is a challenge to anyone who aspires to make a difference in their environment.

Over fourteen promises, it seamlessly intertwines personal anecdotes and workplace and social observation with the latest research, to provide practical, proven tips and strategies to empower you to maximize your own potential and inspire others. It is not a self-help book. It is a how-to guide for winning, rooted in the belief that the most unlikely of people, in the most improbable of circumstances, can become extraordinary. John Amaechi well understands the responsibilities and potential that come with being a giant. The Promises of Giants is the product of a lifetime spent observing and studying effective leadership - from accompanying his mother's visits to her dying patients to competing at the highest levels of professional sport, through two decades of management consulting with multinational corporations. These experiences have shown that everyone has the ability to act decisively to influence the world in a positive way. Everyone is a giant to someone.

Learn how to use a Raspberry Pi in conjunction with an Arduino to build a basic robot with advanced capabilities. Getting started in robotics does not have to be difficult. This book is an insightful and rewarding introduction to robotics and a catalyst for further directed study. You'll be led step by step through the process of building a robot that uses the power of a Linux based computer paired with the simplicity of Arduino. You ' ll learn why the Raspberry Pi is a great choice for a robotics platform; its strengths as well as its shortcomings; how to overcome these limitations by implementing an Arduino; and the

basics of the Python programming language as well as some of the more powerful features. With the Raspberry Pi you can give your project the power of a Linux computer, while Arduino makes interacting with sensors and motors very easy. These two boards are complimentary in their functions; where one falters the other performs admirably. The book also includes references to other great works to help further your growth in the exciting, and now accessible, field of smart robotics. As a bonus, the final chapter of the book demonstrates the real power of the Raspberry Pi by implementing a basic vision system. Using OpenCV and a standard USB web cam, you will build a robot that can chase a ball. What You'll Learn Install Raspbian, the operating system that drives the Raspberry Pi Drive motors through an I2C motor controller Read data through sensors attached to an Arduino Who This Book Is For Hobbyists and students looking for a rapid start in robotics. It assumes no technical background. Readers are guided to pursue the areas that interest them in more detail as they learn.

You 're young? Check. You 've felt God 's tap on the shoulder,
like he 's got something for you to do with your life? Right. But
you 're not exactly sure what it is, or how to get there? Exactly. If
that 's you, then here 's a great guide to help you find your way to
whatever it is God has for you in life. You may be surprised to learn
that a very famous person in the Bible found himself in a similar
place. David was just watching some sheep, but God made it clear he
was destined to do something a bit more meaningful and
important – David was going to be king. As a young man he had to
learn how to “ live into ” his calling – become like a king before
ever putting on the crown. You probably won 't be joining the royal
family any time soon. But you can still learn a lot about life – your
life, your destiny – by taking a good look at David 's life. David had
a dream and caught a glimpse of his purpose. He just didn 't know
how to realize it, how to live until he did, and how to wait for it
proactively. Maybe that 's you, too. In this amusing, amazing, and
very surprising guidebook, Rob Brendle can help you get there from
here.

Researchers commonly ask subjects to self-identify their race from a menu
of preestablished options. Yet if race is a multidimensional, multilevel
social construction, this has profound methodological implications for the
sciences and social sciences. Race must inform how we design large-scale
data collection and how scientists utilize race in the context of specific

research questions. This landmark collection argues for the recognition of
those implications for research and suggests ways in which they may be
integrated into future scientific endeavors. It concludes on a prescriptive
note, providing an arsenal of multidisciplinary, conceptual, and
methodological tools for studying race specifically within the context of
health inequalities. Contributors: John A. Garcia, Arline T. Geronimus,

Where the fate of a company is on the line in a negotiation, legal and business
teams must work seamlessly to reach a successful conclusion. Unfortunately,
there's often a gap between lawyers, who are typically untrained in business
strategy, and business executives, who lack basic knowledge of contract law and
regulations. In *Betting the Company: Complex Negotiation Strategies for Law
and Business*, Andrew Trask and Andrew DeGuire offer a thorough
introduction to enable lawyers and business people to understand the theoretical
concepts and to apply practical tools to conduct a successful, multi-faceted
negotiation. The authors, both of whom have extensive experience conducting
high-stakes negotiation, explain the different strategic considerations negotiators
face, from the pressures on individuals representing a larger group to the
difficulties that arise from clashes of corporate culture. They also discuss the
specific challenges raised by negotiations that involve multiple parties, multiple
issues, and take place over longer periods of time. Throughout this illuminating
book, Trask and DeGuire provide concrete, practical advice on how best to
guide companies through the most difficult negotiations.

A practical and personal approach to apologetics for students. How many times has your teacher asked you a question, and you stare blankly at the ceiling, hoping to discover the answer lingering there? It's frustrating when we don't know the answers to the questions we're asked by others, but it can be even more frustrating when we don't know the answers to the questions we are asking ourselves. Have you ever asked one of these questions? • Does what I think really matter? • What is truth? • Is God there? • Has God spoken? • Am I important enough? • Am I good enough? • What's so great about heaven? If you've ever wondered about any of these questions, you've come to the right place. In *Living with Questions*, Dale Fincher will help you look at each of these questions in such a way that you'll discover clues, helpful tools, and answers—and what they all mean for your life and your faith. The answers you find will put you on a path to dig deeper and gain confidence in your faith. As Dale addresses the big questions that he's been asked by students across the country, you'll find that you're not alone in your doubt, confusion, or questioning. As you learn to live with questions, even the answers are only steps in the right direction. You'll find how they whet the appetite to go deeper into your purpose on this planet and to discover something big—yet very personal—that's worth living for.

Using *Figurative Language* presents results from a multidisciplinary decades-long study of figurative language that addresses the question, 'Why don't people just say what they mean?' This research empirically investigates goals speakers or writers have when speaking (writing) figuratively, and concomitantly, meaning effects wrought by figurative language usage. These 'pragmatic effects' arise from many kinds of figurative language including metaphors (e.g. 'This computer is a dinosaur'), verbal irony (e.g. 'Nice place you got here'), idioms (e.g. 'Bite the bullet'), proverbs (e.g. 'Don't put all your eggs in one basket') and others. Reviewed studies explore mechanisms - linguistic, psychological, social and others - underlying pragmatic effects, some traced to basic processes

embedded in human sensory, perceptual, embodied, cognitive, social and schematic functioning. The book should interest readers, researchers and scholars in fields beyond psychology, linguistics and philosophy that share interests in figurative language - including language studies, communication, literary criticism, neuroscience, semiotics, rhetoric and anthropology.

With the growth of threats and violence in higher education settings, college campuses are increasingly expected to have systems in place to identify potentially aggressive individuals and intervene to ensure the safety of the campus population. This book will be useful for student affairs professionals as well as college counselors, psychologists, social workers interested in the practical management of aggression and violence on a college campus. It will also be a valuable resource for those involved in creating and running behavioral intervention teams and threat/risk assessment teams. Ten case studies from both the community and residential college settings provide a comprehensive overview of campus violence and how to intervene to prevent it. Pertinent background information is discussed as an introduction to these narratives, such as the fundamentals of aggression and violence on campuses; how these behaviors can impact students, faculty, and staff; and what can be learned from past campus violence. Along with discussion questions

and a review of ways to approach each situation, experts in higher education, forensic risk assessment, law enforcement, and legal issues weigh in on each case study. Their perspectives offer a context and broad base of opinions and ideas on how each case could be handled. Additional examples for further training of the college counselor are given through a detailed look at almost 100 incidents of violence, including thwarted attacks, rampage shootings, and hostage situations.

What can magic tell us about ourselves and our daily lives? If you subtly change the subject during an uncomfortable conversation, did you know you're using attentional 'misdirection', a core technique of magic? And if you've ever bought an expensive item you'd sworn never to buy, you were probably unaware that the salesperson was, like an accomplished magician, a master at creating the 'illusion of choice'. Leading neuroscientists Stephen Macknik and Susana Martinez-Conde meet with magicians from all over the world to explain how the magician's art sheds light on consciousness, memory, attention, and belief. As the founders of the new discipline of NeuroMagic, they combine cutting-edge scientific research with startling insights into the tricks of the magic trade. By understanding how magic manipulates the processes in our brains, we can better understand how we work - in fields from law and education to marketing, health and psychology - for good and for ill.
