And answers to questions like: 1) Does a thinner or thicker edge last longer? 2) What heat treatment leads to the best performance? 3) Are there performance benefits to forging blades? 4) Should I use stainless or carbon steel? All of these questions and more are answered by a metallurgist who grew up around the knife industry.

Introduction to Knifemaking Independently Published

This book will teach you to hand build a knife using the traditional method of blacksmiths of old-FORGING. Traditional forging of a knife blade is a process which uses the ancient techniques of moving hot steel with hammer and anvil alone into a knife-form that is ready for filing, heat treating and sharpening with no or very minimal electric grinding. Almost anyone with basic hand tool aptitude can learn to make a knife by forging. Forging skills are not outside the average person's facility or capacity. Like so many things, it is an acquired ability. If this is a new encounter for you it will necessitate your swinging a hammer; not at a nail but at a piece of hot steel, learning and applying some ten or twelve blacksmithing techniques and secrets, and experiencing some trial and error. I have taught hundreds of

men, women and a few children to do this and I am confident you can learn to do this too. As a wise man once said: "Life is trial and error, mostly error". I make errors every time I go to my anvil. So will you. This book also teaches traditional fit-and-finish skills with hand tools alone. It explains an ancient riveted full-tang handle construction system that surpasses modern methods. This book is designed for both first-time, back-yard beginner smiths and experienced knifemakers and any general blacksmiths in between wanting to build a knife using these ancient ways. In my early blacksmithing years, I was unbelievably lucky to get to know some old smiths who wrangled hot iron every day just to make a living. They unselfishly taught me traditional blacksmithing skills and knife forging methods. Every time I use those skills and methods, I honor their friendships, and by teaching you, the reader, we keep alive the memory of those old-time iron pounders.

This book provides everything you need to know to get a head start on becoming a blade smith.

This book is heavily illustrated with over 250 full-color photographs. The text details every aspect of the craft and provides step-by-step instructions as well as teaches tricks of the trade that will make each build a little easier. The book is designed to not only explain each step but also visually depict the process. The book is written for the layman and details making a full tang fixed blade knife by using the stock removal method, hand forging a hidden tang blade, and crafting a knife from a pre-cut commercially available knife blank. Learn what tools you will need, what steel is the best choice, how to profile the knives shape, how to grind flat bevels, hollow grinds and full flat bevels, how to harden the steel blade so it will be hard enough to hold an edge and strong enough not to break. The book also covers creative aspects of the craft like decorative blade etching and blade textures which allow the maker to transform a standard knife into a one of a kind piece of metal art. Whether it's for hunting or kitchen use, anyone interested in learning how to make a knife will surely find this book informative and indispensable.

Bladesmithing Simon and Schuster

As more and more people join the do-it-yourself revolution, they are breathing new life into many time-honored skills and crafts. Blacksmithing is among the trades that are enjoying a resurgence for both practical and artistic uses, yet there is not an abundance of readily accessible information available to beginning blacksmiths to help them get started and understand the craft. Author Ryan Ridgway, a veterinarian and blacksmith with more than fifteen years of metalworking experience, hopes to fill that void with this comprehensive volume geared toward answering the many questions that new blacksmiths often have. By explaining the physics of moving metal, the different styles of anvils and forges, and alternative fuel sources, Ridgway sets his book apart from less detailed volumes. Forty practical, easy-to-follow projects are presented, showing aspiring blacksmiths how to make tools, such as hammers and chisels; farm implements, such as gate latches and hoof picks; and items for home use, including drawer pulls and candle holders. Inside The Home Blacksmith: The evolution of blacksmithing around the world and the differences between the tools specific to each region The behavior of heated metal and the science of metalworking Setting up a shop safely and economically The heart of your shop, the anvil and forge, and the other essential tools Working with different types of steel, including how to salvage steel for different uses Techniques from beginning to advanced Step-by-step instructions for forty blacksmithing projects: tools and other implements as well as decorative pieces for personal use or sale.
