This book describes the fifteen strategies identified through research reviewed by The National Dropout Prevention Center and Network at Clemson University. Each chapter in this book was written by a nationally recognized authority in that field. Research has shown that these 15 strategies have been successfully implemented in all school levels from K - 12 in rural, suburban, and urban centers; as stand-alone programs or as part of systemic school improvement plans. Helping Students Graduate: A Strategic Approach to Dropout Prevention also covers No Child Left Behind and its effects on dropout rates; Dealing with Hispanic dropouts; Differences and similarities between rural and urban dropouts. These fifteen strategies have been adopted by the U.S. Department of Education. They are applicable to all students, including students with disabilities.

There are 2.4 billion people without improved sanitation and another 2.1 billion with inadequate sanitation (i.e. wastewater drains directly into surface waters), and despite improvements over the past decades, the unsafe management of fecal waste and wastewater continues to present a major risk to public health and the environment (UN, 2016). There is growing interest in low cost sanitation solutions which harness natural systems. However, it can be difficult for wastewater utility managers to understand under what conditions such nature-based solutions (NBS) might be applicable and how best to combine traditional infrastructure, for example an activated sludge treatment plant, with an NBS such as treatment wetlands. There is increasing scientific evidence that treatment systems with designs inspired by nature are highly efficient treatment technologies. The cost-effective design and implementation of ecosystems in wastewater treatment is something that exists and has the potential to be further promoted globally as both a sustainable and practical solution. This book serves as a compilation of technical references, case examples and guidance for applying nature-based solutions for treatment of domestic wastewater, and enables a wide variety of stakeholders to understand the design parameters, removal efficiencies, costs, co-benefits for both people and nature and trade-offs for consideration in their local context. Examples through case studies are from across the globe and provide practical insights into the variety of potentially applicable solutions.

"The one source that sets reference collections on Latin American studies apart from all other geographic areas of the world.... The Handbook has provided scholars interested in Latin America with a bibliographical source of a quality unavailable to scholars in most other branches of area studies." —Latin American Research Review Beginning with volume 41 (1979), the University of Texas Press became the publisher of the Handbook of Latin American Studies, the most comprehensive annual bibliography in the field. Compiled by the Hispanic Division of the Library of Congress and annotated by a corps of more than 130 specialists in various disciplines, the Handbook alternates from year to year between social sciences and humanities. The Handbook annotates works on Mexico, Central America, the Caribbean and the Guianas, Spanish South America, and Brazil, as well as materials covering Latin America as a whole. Most of the subsections are preceded by introductory essays that serve as biannual evaluations of the literature and research under way in specialized areas. The Handbook of Latin American Studies is the oldest continuing reference work in the field. Lawrence Boudon, of the Library of Congress Hispanic Division, has been the editor since 2000, and Katherine D. McCann has been assistant editor since 1999. The subject categories for Volume 60 are as follows: Art History (including ethnohistory) Literature (including translations from the Spanish and Portuguese) Music Philosophy: Latin American Thought

E-Books in Academic Libraries: Stepping Up to the Challenge provides readers with a view of the changing and emerging roles of electronic books in higher education. The three main sections contain contributions by experts in the publisher/vendor arena, as well as by librarians who report on both the challenges of offering and managing e-books and on the issues surrounding patron use of e-books. The case study section offers perspectives from seven different sizes and types of libraries whose librarians describe innovative and thought-provoking projects involving e-books. Read about perspectives on e-books from organizations as diverse as a commercial publisher and an association press. Learn about the viewpoint of a jobber. Find out about the e-book challenges facing librarians, such as the quest to control costs in the patron-driven acquisitions (PDA) model, how to solve the dilemma of resource sharing with e-books, and how to manage PDA in the consortial environment. See what patron use of e-books reveals about reading habits and disciplinary differences. Finally, in the case study section, discover how to promote scholarly e-books, how to manage an e-reader checkout program, and how one library replaced most of its print collection with e-books. These and other examples illustrate how innovative librarians use e-books to enhance users' experiences with scholarly works.

Comprises a collection of papers presented at the 7th International Conference on Harmonisation between Architecture and Nature, this volume reviews the challenges and new opportunities of contemporary architecture. These papers cover the results of advances in design and new building technologies, as well as the development of new materials. Many of the changes are motivated by a drive towards eco-architecture, trying to harmonise architectural products with nature. Another important issue is the adaptation of the architectural design to the natural environment, learning from nature and traditional construction techniques. Never before in history have architects and engineers had such a range of new processes and products open to them. In spite of that, the construction industry lags behind all others in taking advantage of a wide variety of new technologies. This is understandable, due to the inherent complexity and uniqueness of each architectural project. Advances in computer and information systems, including robotics, offers the possibility of developing new architectural forms, construction products and building technologies which are just now starting to emerge. Changes have also taken place in the way modern society works and lives, due to the impact of modern technologies. Patterns of work have been disrupted and changed, affecting transportation and the home environment. The demand is for a new type of habitat that can respond to the changes and the consequent requirements in terms of urban environment. The papers contained in this book deal with topics such as building technologies, design by passive systems, design with nature, cultural sensitivity, life cycle assessment, resources and rehabilitation and many others including case studies from many different places around the world. They will be of interest to architects, engineers, planners, physical scientists, sociologists and economists.
The Tyranny of Metrics Pearson Scott Foresman
Universal Design in Higher Education looks at the design of physical and

technological environments at institutions of higher education; at issues pertaining to curriculum and instruction; and at the full array of student services. Universal Design in Higher Education is a comprehensive guide for researchers and practitioners on creating fully accessible college and university programs. It is founded upon, and contributes to, theories of universal design in education that have been gaining increasingly wide attention in recent years. As greater numbers of students with disabilities attend postsecondary educational institutions, administrators have expressed increased interest in making their programs accessible to all students. This book provides both theoretical and practical guidance for schools as they work to turn this admirable goal into a reality. It addresses a comprehensive range of topics on universal design for higher education institutions, thus making a crucial contribution to the growing body of literature on special education and universal design. This book will be of unique value to university and college administrators, and to special education researchers, practitioners, and activists.

How the obsession with quantifying human performance threatens business, medicine, education, government—and the quality of our lives Today, organizations of all kinds are ruled by the belief that the path to success is quantifying human performance, publicizing the results, and dividing up the rewards based on the numbers. But in our zeal to instill the evaluation process with scientific rigor, we've gone from measuring performance to fixating on measuring itself—and this tyranny of metrics now threatens the quality of our organizations and lives. In this brief, accessible, and powerful book, Jerry Muller uncovers the damage metrics are causing and shows how we can begin to fix the problem. Filled with examples from business, medicine, education, government, and other fields, the book explains why paying for measured performance doesn't work, why surgical scorecards may increase deaths, and much more. But Muller also shows that, when used as a complement to judgment based on personal experience, metrics can be beneficial, and he includes an invaluable checklist of when and how to use them. The result is an essential corrective to a harmful trend that increasingly affects us all.

"Lars Eighner is the Thoreau of the Dumpsters. Comparisons to Defoe's Robinson Crusoe and Hamsun's Hunger leap to mind. A classic of down-and-out literature." —Phillip Lopate When Travels with Lizbeth was first published in 1993, it was proclaimed an instant classic. Lars Eighner's account of his descent into homelessness and his adventures on the streets has moved, charmed, and amused generations of readers. As Lars wrote, "When I began writing this account I was living under a shower curtain in a stand of bamboo in a public park. I did not undertake to write about homelessness, but wrote what I knew, as an artist paints a still life, not because he is especially fond of fruit, but because the subject is readily at hand." Containing the widely anthologized essay "On Dumpster Diving," Travels with Lizbeth is a beautifully written account of one man's experience of homelessness, a story of physical survival, and the triumph of the artistic spirit in the face of enormous adversity. In his unique voice—dry, disciplined, poignant, comic—Eighner celebrates the companionship of his dog, Lizbeth, and recounts their ongoing struggle to survive on the streets of Austin, Texas, and hitchhiking along the highways to Southern California and back.

Like the original version of Teaching Computers to Teach, this updated edition presents procedures and principles for designing computer-presented instruction. It was written as a result of recent developments in three domains that have significant implications for computer-assisted instruction (CAI) and computer-based training (CBT). These areas are audio and videodisc technology, CAI and CBT experience, and research in the processes of learning. This practical book is written specifically for people who want to learn to design CAI. The book presents a CAI-specific design procedure by integrating knowledge about unique aspects of human-machine interaction with theories of learning and instruction as well as practical experience with CAI. The reader is guided through the entire design process, from initial planning to final evaluation, by clearcut principles and concrete examples.
