Forget the 10,000 hour rule— what if it's possible to learn the basics of any new skill in 20 hours or less? Take a moment to consider how many things you want to learn to do. What's on your list? What's holding you back from getting started? Are you worried about the time and effort it takes to acquire new skills—time you don't have and effort you can't spare? Research suggests it takes 10,000 hours to develop a new skill. In this nonstop world when will you ever find that much time and energy? To make matters worse, the early hours of practicing something new are always the most frustrating. That's why it's difficult to learn how to speak a new language, play an instrument, hit a golf ball, or shoot great photos. It's so much easier to watch TV or surf the web . . . In *The First 20 Hours*, Josh Kaufman offers a systematic approach to rapid skill acquisition— how to learn any new skill as quickly as possible. His method shows you how to deconstruct complex skills, maximize productive practice, and remove common learning barriers. By completing just 20 hours of focused, deliberate practice you'll go from knowing absolutely nothing to

performing noticeably well. Kaufman personally field-tested the methods in this book. You'll have a front row seat as he develops a personal yoga practice, writes his own web-based computer programs, teaches himself to touch type on a nonstandard keyboard, explores the oldest and most complex board game in history, picks up the ukulele, and learns how to windsurf. Here are a few of the simple techniques he teaches: Define your target performance level: Figure out what your desired level of skill looks like, what you're trying to achieve, and what you'll be able to do when you're done. The more specific, the better. Deconstruct the skill: Most of the things we think of as skills are actually bundles of smaller subskills. If you break down the subcomponents, it's easier to figure out which ones are most important and practice those first. Eliminate barriers to practice: Removing common distractions and unnecessary effort makes it much easier to sit down and focus on deliberate practice. Create fast feedback loops: Getting accurate, real-time information about how well you're performing during practice makes it much easier to improve. Whether you want to paint a

portrait, launch a start-up, fly an airplane, or juggle flaming chainsaws, The First 20 Hours will help you pick up the basics of any skill in record time . . . and have more fun along the way.

“ An outstanding work ... the [soccer] book of the decade. ”
—Sunday Business Post Inverting the Pyramid is a pioneering soccer book that chronicles the evolution of soccer tactics and the lives of the itinerant coaching geniuses who have spread their distinctive styles across the globe. Through Jonathan Wilson's brilliant historical detective work we learn how the South Americans shrugged off the British colonial order to add their own finesse to the game; how the Europeans harnessed individual technique and built it into a team structure; how the game once featured five forwards up front, while now a lone striker is not uncommon. Inverting the Pyramid provides a definitive understanding of the tactical genius of modern-day Barcelona, for the first time showing how their style of play developed from Dutch “ Total Football, ” which itself was an evolution of the Scottish passing game invented by Queens Park in the 1870s and taken on by Tottenham Hotspur in the 1930s. Inverting the Pyramid has been called the “ Big Daddy ” (Zonal Marking) of soccer tactics books; it is essential for any coach, fan, player, or fantasy manager of the beautiful game

This remarkable and monumental book at last provides a comprehensive answer to the age-old riddle of whether there are only a small number of 'basic stories' in the world. Using a wealth of examples, from ancient myths and folk tales via the plays and novels of great literature to the popular movies and TV soap operas of today, it shows that there are seven archetypal themes which recur throughout every kind of storytelling. But this is only the prelude to an investigation into how and why we are 'programmed' to imagine stories in these ways, and how they relate to the inmost patterns of human psychology. Drawing on a vast array of examples, from Proust to detective stories, from the Marquis de Sade to E.T., Christopher Booker then leads us through the extraordinary changes in the nature of storytelling over the past 200 years, and why so many stories have 'lost the plot' by losing touch with their underlying archetypal purpose. Booker analyses why evolution has given us the need to tell stories and illustrates how storytelling has provided a uniquely revealing mirror to mankind's psychological development over the past 5000 years. This seminal book opens up in an entirely new way our understanding of the real purpose storytelling plays in our lives, and will be a talking point for years to come.

This book advances a journalistic theory of empathy, challenging long-held notions about how best to do journalism. Because the institution of journalism has typically equated empathy and compassion with bias, it has been slow to give the intelligence of the emotions a legitimate place in the reporting and writing process. Blank-Libra ' s work locates the point at which the vast, multidisciplinary research on empathy intersects with the work of the journalist, revealing a reality that has always been so: journalists practice empathy as a way to connect but also as a form of inquiry, as sincere and legitimate in its goals and aspirations as is objectivity.
