This book carefully considers hydrological models which are essential for predicting floods, droughts, soil moisture estimation, land use change detection, geomorphology and water structures. The book highlights recent advances in the area of hydrological modelling in the Ganga Basin and other internationally important river basins. To solve business problems, students need to understand how managerial accounting can improve decision-making, and when and where a particular tool or technique is appropriate. Balakrishnan's Managerial Accounting 1st edition presents accounting information in the context of business decision making. It combines the traditional topics of managerial accounting with a strategic framework that shows students how to construct decision models and measure information. By linking business decisions with accounting information students will be motivated to learn and make more informed decisions.
