A pair of fierce but beautiful eyes look out from the undergrowth of conifers. She is an intelligent killer... So begins one of the most extraordinary novels you will ever read. The time is 120 million years ago, the place is the plains of prehistoric Utah, and the eyes belong to an unforgettable heroine. Her name is Raptor Red, and she is a female Raptor dinosaur. Painting a rich and colorful picture of a lush prehistoric world, leading paleontologist Robert T. Bakker tells his story from within Raptor Red's extraordinary mind, dramatizing his revolutionary theories in this exciting tale. From a tragic loss to the fierce struggle for survival to a daring migration to the Pacific Ocean to escape a deadly new predator, Raptor Red combines fact and fiction to capture for the first time the thoughts, emotions, and behaviors of the most magnificent, enigmatic creatures ever to walk the face of the earth.

Introduction to Dinosaurs Prodigy Wizard Books

Dinosaurs were amazing creatures. From the time the first dinosaur bones were unearthed, the story of these unusual animals has captivated both the young and old. We continue to learn more about them from the fossil record, but there are still many questions: How do dinosaurs fit with the Bible? Are they really millions of years old? Did they live at the same time as humans? Were there dinosaurs on Noah's Ark? How did they go extinct? Guide to Dinosaurs is a fascinating and lavishly illustrated volume that takes a careful look at the evidence and how it fits with the historic accounts given in Scripture.

The fossilized remains of the Tyrannosaurus are found in the world's biggest dig sites, which are located in Montana. Palaeontologists discover new things about dinosaurs in dig sites. Dinosaurs can be huge, weird, tiny and even wonderful. The Tyrannosaurus Rex, as we will find out, was one of the huge dinosaurs palaeontologists have discovered.

Dinosaur Coloring Book Frances Lincoln Children's Books

Dinosaurs are fascinating creatures and their popularity seems never ending, fuelled by films such as Jurassic Park and documentaries such as Walking with Dinosaurs. Yet dinosaurs (or more precisely non-avian dinosaurs) last trod the Earth 65 million years ago. All we know of them today are their fossilised bones, the tracks and traces that they left behind and, in very rare instances, some of the soft tissues or even traces of their chemistry. In many respects dinosaurs present us with one of the ultimate forensic challenges: they comprise the fragmentary remains of creatures that died many tens of millions of years ago, rather than just recently, or a few tens of years ago, which is the problem usually faced by forensic pathologists. How much do we really know about them, and to what extent can their remains inform us about ancient worlds, and indeed about the history of our planet? In this Very Short Introduction David Norman discusses how dinosaurs were first discovered and interpreted, and how our understanding of them has changed over the past 200 years. He looks at some of the amazing discoveries that have enabled us to gain new and unexpected insights into dinosaurs as animals with natural histories and behaviours, and considers some of the biggest questions in dinosaur biology, such as the implications of them having warm blood. Norman also shows how research upon dinosaurs has been enriched, particularly in recent decades, by technological break-throughs, which complement the informed speculation and luck which have played a part in many of the major discoveries. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts,

analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.
