Over the past two decades, globalization, digitization, and the rise of the Internet have each contributed to a new prominence for

intellectual property law in public policy debates around the world. Questions about how intellectual property is controlled, licensed, used, and reused are all part of a growing public discourse that now engages far more than an elite cadre of lawyers. Because intellectual property law now trenches so deeply on issues of economics, culture, health, commerce, creativity, and intellectual freedom, it is no surprise that there is also a burgeoning

literature on intellectual property issues that comes, not just from legal academics or lawyers, but from those trained in other disciplines. In the spring of 2012, the Centre for Law, Technology, and Society at the University of Ottawa hosted a workshop that sought to bring together academics from different disciplines interested in intellectual property law in order to stimulate discussion across disciplines, to encourage the development of

collaborative efforts, and to produce a body of research that explores intellectual property law issues from explicitly interdisciplinary perspectives. The collection of papers in this book is the product of this workshop.

Franklin Classics Examines the life and disappearance of the pilot who

was the first woman to cross the Atlantic in a plane by herself. *NMR · 3D Analysis · Photopolymerization* on John Wiley & Sons Incorporated Since the first edition was published in 1983, this highly-regarded introductory textbook has been used by many generations of students worldwide. It is specifically tailored to the requirements of first or second year geology undergraduates. The third edition has been extensively revised and updated to include many new sections and over 50 new or redrawn illustrations. There are now over 220

illustrations, many incorporating a second colour to highlight essential features. The format has been changed to enhance the visual attractiveness of the book. The tripartite organization of the first and second editions has been modified by combining the purely descriptive or factual aspects of fault and fold structure in the earlier chapters with a simple treatment of mechanisms, leaving the more geometrically complex treatment until after the relevant sections on stress and strain, as before. Some subjects are introduced for the first time, e.g. inversion and

orogen collapse, and others have been extensively modified, e.g. the chapter on gravity controlled structures now emphasises modern work on salt tectonics. The last third of the book is devoted to the wider context of geological structures and how they relate to plate tectonics. The final two chapters have been considerably expanded and give examples of various types of geological structures in their plate tectonic settings in both modern and ancient orogenic belts.
